## **VISION**

To be a Centre of Excellence of International repute in education and research.

## **MISSION**

To produce technically competent, socially committed technocrats and administrators through Quality Education and Research

## **DEPARTMENT OF MECHANICAL ENGINEERING**

### **VISION**

To be Recognized Globally as a Lead in Mechanical Engineering through excellence in Education and Innovative Research in Emerging areas

### **MISSION**

To provide quality education and research with the state of the art facilities to the student

This is accomplished by:

- Enhancing the Knowledge and Expertise through Professional Programmes and Research Works.
- Endowing the Students with Academic Leadership, Communication Skills and Professional Awareness towards Social Commitment.

**KALASALINGAM**  
**ACADEMY OF RESEARCH AND EDUCATION**  
**(DEEMED TO BE UNIVERSITY)**

Under sec. 3 of UGC Act 1956.

### ABET STUDENT OUTCOMES (ASO)

**ASO1:** An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.

**ASO2:** An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.

**ASO3:** An ability to communicate effectively with a range of audiences.

**ASO4:** An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.

**ASO5:** An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.

**ASO6:** An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**ASO7:** An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

**KALASALINGAM**  
**ACADEMY OF RESEARCH AND EDUCATION**  
**(DEEMED TO BE UNIVERSITY)**

Under sec. 3 of UGC Act 1956.

Anand Nagar, Krishnankoil - 626126. Srivilliputtur (Via), Virudhunagar (Dt), Tamil Nadu | [info@kalasalingam.ac.in](mailto:info@kalasalingam.ac.in) | [www.kalasalingam.ac.in](http://www.kalasalingam.ac.in)

### PROGRAM OUTCOMES (POs)

**PO1: Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

**PO2: Problem analysis:** Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO3: Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO4: Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO5: Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

**PO6: The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**PO7: Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of the need for sustainable development.

**PO8: Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO9: Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO10 - Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**KALASALINGAM**  
**ACADEMY OF RESEARCH AND EDUCATION**  
**(DEEMED TO BE UNIVERSITY)**

Under sec. 3 of UGC Act 1956.

Anand Nagar, Krishnankoil - 626126. Srivilliputtur (Via), Virudhunagar (Dt), Tamil Nadu | [info@kalasalingam.ac.in](mailto:info@kalasalingam.ac.in) | [www.kalasalingam.ac.in](http://www.kalasalingam.ac.in)

---

**PO11 - Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO12 - Life-long learning:** Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**PSO1: PO13 -** An ability to utilize the gained knowledge of mathematics and engineering sciences to real time problems involving thermal, design, manufacturing and materials domain.

**PSO2: PO14 -** An ability to specify, fabricate, test, operate, validate and complete documentation of any basic mechanical systems or processes.

**PSO3: PO15 -** An ability to apply the acquired software's skills to design and analysis of advanced mechanical systems or processes.

## LIST OF COURSES

S.No.	Name	Category	L	T	P	X	C
1	Introduction to Engineering Visualization	Foundation	0	0	2	3	2
2	Sustainable Design Manufacturing	Foundation	1	0	2	3	3
<b>FOUNDATION COURSE TOTAL CREDITS</b>							<b>6</b>

# FOUNDATION COURSES

<b>211MEC1201 INTRODUCTION TO ENGINEERING VISUALIZATION</b>	<b>L</b>	<b>P</b>	<b>X</b>	<b>C</b>
	<b>0</b>	<b>4</b>	<b>3</b>	<b>3</b>
<b>Prerequisite:</b> Nil	<b>Course Category:</b> Foundation Core <b>Course Type:</b> Practical with X Component			

**Course Objective(s):**

This course aims to introduce the concept of graphic visualization and design of engineering products, Demonstrate skills in interpreting, and producing engineering drawings accurately

**Course Outcome(s):**

<b>CO1</b>	Draw freehand sketch of 2D and 3D models through visual observation
<b>CO2</b>	Construct the geometric models of various solids and surfaces
<b>CO3</b>	Illustrate the solid intersections and their new surfaces
<b>CO4</b>	Construct the sheet metal models for various engineering components
<b>CO5</b>	Create perspective visual models for designed products

**Mapping of Course Outcome(s):**

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2		2										1	1	
<b>CO2</b>		3										1	1	1	
<b>CO3</b>	2		3		3		3					2	3	2	3
<b>CO4</b>	1	2			3		3					3	3	2	3
<b>CO5</b>	3		3		3		3					3	3	2	3

**Course Topics:**

**UNIT I: INTRODUCTION AND FREE HAND SKETCHING**

Drawing and its Standards - Importance of graphics – use of drafting instruments – BIS conventions and specifications – application of concept of points and straight lines projection located in the different quadrants,– Free hand sketching from industrial parts/components – preparation of software models – prepare 2D layouts for the 3D sketches

**UNIT II: GEOMETRICAL METHODS IN VISUALIZATION**

Geometrical and analytical methods of measuring distance between locations and objects – construction of polygonal surface and circular lamina and their projections – constructing engineering designs based on solids modelling – 3D and 2D sketches from parametric modelling

### **UNIT III: SOLIDS AND INTERACTION VISUALIZATIONS**

Solid sections – section and intersection of prisms, pyramids, cylinder and cone by specific cutting planes conditions and solid-solid interaction - curvilinear and rectilinear surface – parametric modelling – finding physical properties

### **UNIT IV: SHEET METAL MODELING**

Sheet metal modelling and generating development of full, frustum and truncated solid parts and modelling from 3D geometry. Real-time automotive and aerospace surface profiles/structures modelling and layout preparation

### **UNIT V: PRODUCT VISUALIZATION**

Product visualization – technical drawing with 3D representation through isometric view and projection with scales – application of parallel and perspective projection method using CAD – final show-case model development through different perspective projection methods – lighting and aesthetics – materials property imparts and bill of material creations

#### **Practical:**

##### **Unit I**

Drawing and its Standards

Brainstorming session by comparing the industrial standards

Understanding and generating 3D drawing of disc

##### **Unit II**

Formation of 3D drawing of Wheels

Geometrical and analytical model of point

Geometrical model of projecting a Line by manual parallel projection

##### **Unit III**

Geometrical model of projecting a plane by manual parallel projection

Geometrical and analytical model of various regular solids - projecting a plane by manual parallel projection

Geometrical and analytical model of various truncated solids - projecting a plane by manual parallel projection

##### **Unit IV**

Construction and developing of curvilinear developed surface

Construction and developing and rectilinear developed surface

Combination of surfaces

##### **Unit V**

Axonometric projection

Projection of solid by perspective method (Visual ray methods)

Projection of Simple solids by perspective method (Vanishing Point method)

**X-Component:**

1. Free Hand Sketching on Selected Models and layouts
2. 3D Sketching of simple models
3. 2D layout preparation through parallel projection
4. *ANSI standard layout reparations*
5. *Geometrical and analytical methods for point locations*
6. *Geometrical and analytical methods for line locations*
7. Areal and mass properties of planar surfaces through CAD
8. Solid and mass properties of regular prismatic objects through CAD
9. Irregular solid characteristics through CAD
10. *Curvilinear surface creation through CAD*
11. *Rectilinear surface sketching through CAD*
12. *Model curvilinear and rectilinear surface for automotive*
13. 2D and 3D sketching with layout for simple solids
14. Parallel and perspective projection method for elevated structures
15. Projecting longer structures through Parallel and perspective projections

<b>211MEC1401</b> <b>SUSTAINABLE DESIGN MANUFACTURING</b>		<b>L</b>	<b>P</b>	<b>X</b>	<b>C</b>
		<b>1</b>	<b>2</b>	<b>3</b>	<b>3</b>
<b>Prerequisite:</b> Nil		<b>Course Category:</b> Foundation Core <b>Course Type:</b> Theory with Practical and X Component			

**Course Objectives:**

To gain knowledge about the methods, tools and techniques for development of a product in the most sustainable way

**Course Outcomes:**

<b>CO1</b>	Able to apply the sustainable design practices to improve the existing product.
<b>CO2</b>	Able to perform design analysis
<b>CO3</b>	Perform optimization on design and materials selections
<b>CO4</b>	Capable to prepare process layouts for the optimized products
<b>CO5</b>	Choose appropriate method of manufacturing the products

**Mapping of Course Outcome(s):**

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	3	3	2	3		2	2	2	2	1	2	3		
<b>CO2</b>	3	3	3	3	3	1	2	2	2	2	1	2	3		2
<b>CO3</b>	3	3	3	2	3		2	2	2	2	1	2	3	3	3
<b>CO4</b>	3	1	3	2		2	1	2	2	3	2	2	3		

**Course Topics**

**UNIT I: CONCEPTUALIZATION AND DESIGN THINKING**

Stages of design process- Conceptualization techniques- Idea generation

**UNIT II: CAD MODELLING AND OPTIMIZATION**

Control factors and their levels- Noise factors- Metals & smart materials

**UNIT III: MATERIAL SELECTION**

Polymers & composites material- Material selection procedure

**UNIT IV: PRODUCT MANUFACTURING**

Rolling, extrusion-MEMS- binder setting- Directed energy deposition- Powder bed fusion- material jetting

## **UNIT V: MECHANICAL TESTING, RECYCLE & REUSE**

Mechanical Testing- Thermal testing- chemical testing- Dynamic mechanical testing- Process of Recycling

### **Practical:**

#### **Unit I**

Brainstorming  
Conceptualization techniques

#### **Unit II**

CAD Modeling  
Control Factors & Levels

#### **Unit III**

Materials Selection  
Testing of materials (1 and 2)  
Selection of materials based on all factors (including properties)

#### **Unit IV**

Fabrication of component (1 and 2)  
Materials Inspection (1 and 2)

#### **Unit V**

Value Analysis  
Environmental & Sustainability Analysis  
Demo of the product

### **X Component:**

1. Plan for the design modifications in specific product
2. (Create a free hand sketch) Conceptualization techniques
3. CAD Modeling
4. Control Factors and Levels
5. Materials Selection (Ranking)
6. Testing of materials (1 and 2)
7. Selection of materials based on all factors (including properties)
8. Develop a complete functional product (1 and 2)
9. Inspection of the product (1 and 2)
10. Value Analysis
11. Environmental & Sustainability Analysis
12. Report Preparation and Presentation

PROGRAM  
CORE  
COURSES

<b>212MEC1301</b> <b>PRINCIPLES OF ROBOTICS AND INDUSTRIAL AUTOMATION</b>	L	T	P	X	C
	2	0	2	0	3
Prerequisite: Nil	Course Category: Program core course Course type: Theory with Practical				

**Course Objectives:**

To introduce the concept of Robotics and Industrial Automation for the development of a desirable product.

**Course Outcomes:**

<b>CO1</b>	Understand the functional elements of Robotics
<b>CO2</b>	To know about the basic concepts in industrial automation
<b>CO3</b>	To impart knowledge on the direct and inverse kinematics
<b>CO4</b>	To introduce the manipulator differential motion and control and to educate on various path planning technique.
<b>CO5</b>	To Know about the design of mechatronics systems

**Mapping of Course Outcomes:**

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	3	2	2	3		1		2		1	2	2		3
<b>CO2</b>	3	3	2	2					1						
<b>CO3</b>	3	3	2	3	3			2	2		1	2	2		3
<b>CO4</b>	3	3	3	3				2	1		1				
<b>CO5</b>	3	3	3	3			2	1	1		2	2	2		

**Course Topics**

**UNIT I BASIC CONCEPTS OF ROBOTS**

Brief history-Types of Robot–Technology-Robot classifications and specifications-Design and control issues- Various manipulators – Sensors - work cell - Programming languages.

**UNIT II FUNDAMENTAL CONCEPTS OF INDUSTRIAL AUTOMATION**

Fundamental concepts in manufacturing and automation, definition of automation, reasons for automating. Types of production and types of automation, automation strategies, levels of automation.

### **UNIT III DIRECT AND INVERSE KINEMATICS**

Mathematical representation of Robots - Position and orientation – Homogeneous transformation- Various joints- Representation using the Denavit Hattenberg parameters -Degrees of freedom- Direct kinematics-Inverse kinematics- SCARA robots- Solvability – Solution methods-Closed form solution.

### **UNIT IV MANIPULATOR DIFFERENTIAL MOTION AND STATICS**

Linear and angular velocities-Manipulator Jacobian-Prismatic and rotary joints–Inverse -Wrist and arm singularity - Static analysis - Force and moment Balance.

### **UNIT V DESIGN OF MECHATRONIC SYSTEMS**

Stages in design, traditional and mechatronic design, possible design solutions. Case studies-pick and place robot, engine management system.

#### **Practical:**

##### **Unit I**

Study on basics of Robot

Introduction to degrees of freedom and classification of robots

Study on kinematics of robotic arm

##### **Unit II:**

Study on mobile robots

Determination of maximum and minimum position of links.

Verification of transformation (Position and orientation) with respect to gripper and world coordinate system

##### **Unit III**

Estimation of accuracy, repeatability and resolution

Robot programming and simulation for pick and place

Robot programming and simulation for Colour identification

##### **Unit IV**

Robot programming and simulation for Shape identification

Robot programming and simulation for machining (cutting, welding)

Robot programming and simulation for writing practice

##### **Unit V**

Robot programming and simulation for any industrial process (Packaging, Assembly)

Robot programming and simulation for multi process

Pick and place operation by robotic arm

<b>212MEC1302</b> <b>ENGINEERING MECHANICS</b>		L	T	P	X	C
		2	0	2	0	3
Prerequisite: Nil		Course Category: Program core course Course type: Theory with Practical				

### Course Objectives:

To gain knowledge about the concept of equilibrium in both statics and dynamics to analyse real time problems.

### Course Outcomes:

<b>CO1</b>	Demonstrate the equilibrium conditions of particle and rigid body also apply the same for analysis of real time problems.
<b>CO2</b>	Develop models based on the basic principles for analysing various trusses and frames by using analytical and experimental methods.
<b>CO3</b>	Apply the concept of the friction and demonstrate the effects of friction between the surfaces.
<b>CO4</b>	Identify the centroid and moment of inertia of the composite shapes by using analytical and virtual methods.
<b>CO5</b>	Apply the concept of dynamics equilibrium and its equations in analysing the objects under both rectilinear and curvilinear motion.

### Mapping of Course Outcomes:

PO	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
ASO	1	2	2	3	6	5	5	5	7	4	6	6	1,2	3,4,7	2,6
CO1	3	3	2	2	2				2				3	3	2
CO2	3	2	2	2	3				2				3	3	2
CO3	3	2	3	3	2				2				3	3	
CO4	3	3	3	2	2				2				3	3	2
CO5	3	2	2	2	2				2				3	3	

### Course Topics

#### UNIT I: STATICS OF PARTICLES AND RIGID BODIES

Six Fundamental principles and concepts - Force - System of Forces - Coplanar Concurrent Forces - Components in Space, Resultant of forces acting on the particle - Particle in equilibrium – concepts in 2 -D & 3-D – Equations of Equilibrium of Coplanar Systems and Spatial Systems.

Rigid Body - Moment of Forces and its Application - Couples and Resultant of Force System equilibrium in 2-D Supports and its reactions - Pin support - roller support.

## **UNIT II: ANALYSIS OF TRUSSES AND FRAMES**

Basic Structural Analysis- Equilibrium in three dimensions - Method of Sections- Method of Joints- How to determine if a member is in tension or compression- Simple Trusses- Zero force members - Frames & Machines.

## **UNIT III: FRICTION**

Types of friction, limiting friction, Laws of Friction, Static and Dynamic Friction - Motion of Bodies, simple contact friction, sliding block, wedge friction, rolling resistance – Rope and Belt friction.

## **UNIT IV: PROPERTIES OF SURFACES AND SOLIDS**

Centroid of simple figures from first principle, centroid of composite sections - Centre of Gravity and its implications - Area moment of inertia - Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections - Mass moment inertia of circular plate, Cylinder, Cone, Sphere- Principal moment of inertia.

## **UNIT V: DYNAMICS**

Review of particle dynamics - Displacements, velocity and acceleration, their relationship - Equations of motions - Rectilinear motion- Plane curvilinear motion - Newton's 2nd law- Impulse, momentum, impact - D'Alembert's principle and its applications in plane motion and connected bodies - Work energy principle and its application in plane motion of connected bodies - Virtual Work and Energy Method - Virtual displacements, principle of virtual work for particle and ideal system of rigid bodies.

## **Practical:**

### **Unit 1**

Determination of equilibrant acting on a point in a three-force system using Lami's theorem.  
Determination of the equivalent force and its distance from the support.  
Determination of the resultant of the parallel force system.

### **Unit 2**

Analyse the deflection of the Pratt truss with supports on the end.  
Analyse the deflection of the Warren truss with supports on the end.  
Analyse the deflection of the Howe truss with supports on the end.

### **Unit 3**

Determination of the coefficient of friction of the block using the experimental technique.  
Analysis of the load acting on the Wedge for raising and lowering the load.

**Unit 4**

Determination of the centroid of the unknown shape.

Determination of MOI using the bell crank lever apparatus.

**Unit 5**

Determination of acceleration of the connected bodies of various loads.

Determination of range of projectiles by experimental methods.

<b>212MEC1103</b> <b>ENGINEERING THERMODYNAMICS</b>		L	T	P	X	C
		2	1	0	3	4
Prerequisite: Nil		Course Category: Program core course Course type: Theory with X component				

### Course Objectives:

To apply the fundamentals of Thermodynamics upon the process and applications undergoing with respect to the gas power cycles, and refrigeration system

### Course Outcomes:

<b>CO1</b>	Outline the fundamental concepts of law of thermodynamics
<b>CO2</b>	Evaluate the change in entropy and available energy.
<b>CO3</b>	Evaluate properties of pure substances and gas mixtures
<b>CO4</b>	Evaluate the performance of steam power cycles
<b>CO5</b>	Analyze air-conditioning processes using the principles of psychrometry.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	3	1					1				1	3	2	
<b>CO2</b>	3	3	1					1				1	3	2	
<b>CO3</b>	3	3	1					1				1	3	2	
<b>CO4</b>	3	3						1				1	3	2	
<b>CO5</b>	3	3	1					1				2	3	2	

### Course Topics

#### UNIT I: LAWS OF THERMODYNAMICS

Work – modes of work transfer, first Law for Cyclic & Non-cyclic processes; Concept of total energy E; First Law for Flow Processes - Derivation of general energy equation for a control volume, Applications of flow processes; Second law – Kelvin- Planck and Clausius statements. Comparison of Heat Engines- Refrigerator – Heat pumps; Definitions of thermal efficiency and

COP; Definition of reversible process; Internal and external irreversibility; Carnot cycle; Absolute temperature scale.

## **UNIT II: ENTROPY AND AVAILABILITY**

Clausius Theorem – Entropy (S) is a property - Clausius inequality, Illustration of processes in T-S coordinates, Evaluation of S for solids, liquids, ideal gases. Principle of increase of entropy - Definition of Isentropic efficiency for compressors turbines and nozzles, Availability and Irreversibility – available energy in a cycle.

## **UNIT III: PURE SUBSTANCES**

Definition of Pure substance, Ideal Gas Properties; Definitions of saturated states; P-V-T surface; Use of steam tables Saturation tables; Superheated tables; Identification of states & determination of properties, Mollier's chart.

## **UNIT IV: VAPOUR POWER CYCLE**

Basic Rankine cycle, with superheat, reheat and regeneration comparison with Carnot cycle, Comparison of three cycles, discussion on advantages and disadvantages of reheat and regenerative cycles.

## **UNIT V: PSYCHROMETRY**

Psychrometry - atmospheric air and psychrometric properties – dry bulb temperature, wet bulb temperature, dew point temperature, partial pressures, specific and relative humidity, enthalpy and adiabatic saturation temperature - construction and use of psychrometric chart - analysis of various processes- heating, cooling, dehumidifying and humidifying- adiabatic mixing of stream, summer and winter air-conditioning.

### **X component:**

1. Energy calculation for cyclic process using Cycle Tempo / CyclePad / Comsol Multiphysics
2. Calculation of Work transfer in Compressor at polytropic process.
3. Energy conversion calculation in condenser and nozzle.
4. Comparing COP in Refrigerator and Heat Pump.
5. *Determination of Change in Entropy of Closed system.*
6. *Change in Entropy in open system - Cycle Tempo / CyclePad / Comsol Multiphysics.*
7. Cycle Tempo / CyclePad / Comsol Multiphysics – Superheated steam properties
8. Solving numerical problems using Python programming language
9. *Cycle Tempo / CyclePad / Comsol Multiphysics – Reheat in Rankine cycle*
10. Cycle Tempo / CyclePad / Comsol Multiphysics – Dry and Wet Bulb Temperature measurement

**Competition:**

Competition among the Peers at the end of the course based on themes introduced in the course.  
(Various themes can be selected based on faculty-student preference.)

Ex. Clean water making device using thermal based concepts)

**Text book:**

1. Nag, P.K., Engineering Thermodynamics, Tata McGraw-Hill Co. Ltd., 2017
2. Y.A.Cengel, Thermodynamics – An Engineering Approach, Tata Mc Graw Hill, New delhi, Ninth edition, 2019

**Reference book:**

<b>212MEC1104</b> <b>FLUID MECHANICS &amp; MACHINERY</b>		L	T	P	X	C
		2	1	0	3	4
Prerequisite:		Course Category: Program core course Course type: Theory with X-component				

### Course Objectives:

To understand the basic principles of fluid mechanics and to identify fluid characteristics, boundary layer concepts and flow through pipes. To understand/evaluate the performance of turbines and pumps through characteristic curves.

### Course Outcomes:

<b>CO1</b>	Apply the basic concepts to the real time problems on pressure measurement and Buoyancy
<b>CO2</b>	Interpret the kinematics and dynamics of fluid flow and apply Bernoulli's equation to real time problems.
<b>CO3</b>	Calculate and Analyze the different types of losses occurs in a pipe flow
<b>CO4</b>	Contrast the working principle of different turbines and analyze the performance of different turbines
<b>CO5</b>	Select a pump based on application and explain the working principles of different pumps and calculate the performance of various pumps

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	2		2									2	2	2
<b>CO2</b>	3	3	2	3	2								3	3	2
<b>CO3</b>	3	3	2	3	3								3	3	2
<b>CO4</b>	3	3	3	2	2								3	2	
<b>CO5</b>	3	3	3	2	2								3	2	

## **Course Topics**

### **UNIT I: BASIC CONCEPTS AND PROPERTIES**

Fluid—definition, properties of fluids-density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure - fluid statics-concept of fluid static pressure, absolute and gauge pressures-pressure measurements by manometers and Mechanical Gauges. Buoyancy concepts: buoyancy, stability of immersed and floating bodies, Centre of Buoyancy, Metacentre—Determination of Metacentric Height

### **UNIT II: FLUID KINEMATICS AND FLUID DYNAMICS**

Fluid kinematics - flow visualization, lines of flow, types of flow, velocity field and acceleration, continuity equation(one and three dimensional differential forms)-equation of streamline, stream function, velocity potential function, circulation, flow net, fluid dynamics-equations of motion, Euler's equation along a streamline, Bernoulli's equation, applications - Venturimeter, Orifice meter, Pitot tube, Flow measurement using rotameter - dimensional analysis - Buckingham's  $\pi$  theorem applications-similarity laws and models.

### **UNIT III: INCOMPRESSIBLE FLUID FLOW**

Viscous flow-Navier-Stokes equation(Statement only) -shear stress, pressure gradient relationship, Couette flow- laminar flow between parallel plates, Laminar flow through circular tubes (Hagen Poiseuille's) - flow through pipes - Darcy - Weisbach's equation, Moody's diagram- friction factor minor losses— flow through pipes in series and in parallel –boundary layer flows, boundary layer thickness, boundary layer separation, measures of boundary layer thickness, Lift and drag on immersed bodies

### **UNIT IV: HYDRAULIC TURBINES**

Fluid Machines-definition and classification-exchange energy-Euler's Equation for turbomachines- construction of velocity vector diagrams- head and specific work – components of energy transfer-degree of reaction. Hydro turbines-definition and classifications- Pelton wheel, Francis turbine, propeller turbine, Kaplan turbine—working principles-velocity triangles, workdone, specific speed, efficiencies, performance curve for turbines.

### **UNIT V: HYDRAULIC PUMPS**

Pumps- definition and classifications - Centrifugal pump - classifications, working principle, velocity triangles, specific speed, efficiency and performance curves - reciprocating pump classification, working principle, indicator diagram, work saved by air vessels and performance curves - cavitations in pumps - rotary pumps - working principles of gear pump, vane pump, Lobe pump and piston pump, performance of positive displacement pump.

**X Component:**

1. Buoyancy of floating cube
2. Measurement of pressure using simple U-tube, inclined U-tube and piezometer
3. Measurement of fluid density, specific weight, specific volume, specific gravity of water, oil and mercury
4. *Experiments in Bernoulli's equation and pipe flow*
5. *Fluid flow analysis using ANSYS FLUENT*
6. *Fluid Flow analysis through Venturimeter and orifice meter using Ansys Fluent*
7. Experiment on Couette flow
8. Boundary layer flow between two parallel plates
9. Frictional pressure drop in pipe
10. *Design and analysis of turbine characteristic curve using CF Turbo*
11. Design and analysis of pump characteristic curve using CF Turbo

**Text Book(s):**

1. Streeter, V.L., Wylie, E.B., and Bedford K.W., Fluid Mechanics, McGraw-Hill, 9th Edition, 2010.
2. Bansal, R.K., A Textbook of Fluid Mechanics and Hydraulics Machines, Laxmi publications (P) Ltd, New Delhi, 10th edition, 2019.

3. Cengel Y.A., Cimbala, J.M., Fluid Mechanics; Fundamentals and Applications, McGrawHill, 4th edition, 201

## **List of Experiments:**

### **Viscosity**

- Determination of Kinematic Viscosity of fluid at different temperatures using Redwood Viscometer
- Determination of Viscosity of fluid using Saybolt Viscometer

### **Coefficient of discharge**

- Determination of Rate of Flow using Rotameter
- Determination of the Coefficient of discharge of a given Venturimeter.
- Determination of the Coefficient of discharge of a given Orifice meter.

### **Flow net and Bernoulli's Equation**

- Visualization of formation of Flownet for a given set of stream function Equipotential function
- Verification of Bernoulli's Theorem

### **Losses in pipes**

- Determination of friction factor of the given pipe
- To study minor losses of flow through pipe

### **Hydraulic machinery**

- Conducting experiments and drawing the characteristic curves of the Pelton wheel.
- Conducting experiments and drawing the characteristics curves of Francis turbine.
- Conducting experiments and drawing the characteristic Kaplan turbine
- Conducting experiments and drawing the characteristic curves of Centrifugal pump
- Conducting experiments and drawing the characteristic curves of reciprocating pumps.
- Conducting experiments and drawing the characteristic curves of Gear pump.

<b>212MEC2106</b> <b>STRENGTH OF MATERIALS</b>		L	T	P	X	C
		2	1	0	3	4
Prerequisite: Engineering Mechanics (MEC21RXXX)		Course Category: Program core course Course type: Theory with X-component				

### Course Objectives:

To acquire knowledge in the basic concepts of stress, strain and deformation of solids and analyse the beam deflection, torsion in springs and shafts.

### Course Outcomes:

<b>CO1</b>	Analyse the simple stresses in bars, composite bars, thermal stresses and strain energy.
<b>CO2</b>	Analyse the stresses in two dimensional bodies and evaluate the deformation in thin, thick cylinders and spherical shells.
<b>CO3</b>	Demonstrate shear force, bending moment and stress distribution of various types of beams with different support.
<b>CO4</b>	Analyzing the deflection of the beams through various methods.
<b>CO5</b>	Illustrate the deflection of all types of shafts due to torsion and deformation of various types of springs.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	2	3	2	1								3		1
<b>CO2</b>	3	2	3	2	2								3		1
<b>CO3</b>	3	2	3	2	1								3		1
<b>CO4</b>	3	2	3	2	1								3		1
<b>CO5</b>	3	2	3		2								3		1

## **Course Topics**

### **UNIT I: STRESS, STRAIN AND DEFORMATION IN SOLIDS**

Stress - types – Hook's law – elastic constants and relationships between them – composite bars – thermal stresses - Strain Energy – Resilience – Gradually, suddenly, impact loadings

### **UNIT II: STRESS AND DEFORMATION IN TWO DIMENSIONAL BODIES**

Two dimensional state of stress at a point – normal and shear stresses on any plane, principal planes and principal stresses – graphical method– Mohr's Circle - stresses and deformations in thin cylinders and spherical shells due to internal pressure

### **UNIT III: BEAMS AND SUPPORTS**

Beam-types- cantilever, simply supported, overhanging beams. Types of loadings – shear force – bending moment diagram. Theories of bending – bending stress distribution – load carrying capacity for point and distributed loads. Shear stress distribution across various beam sections

### **UNIT IV: DEFLECTION IN BEAMS**

Deflection in beams using double integral method – area moment method for computation of slopes and deflection in beams – Macaulays method - Conjugate beam method.

### **UNIT V: TORSION IN SPRINGS AND SHAFTS**

Torsional stresses and deformation in solid shafts, hollow shafts– Helical springs- Open-Closed coil springs – leaf springs – stresses in springs – Torsion and deformation – deflections in spring.

## **X Component:**

**Projects to be undertaken by students in thematic areas identified after student-faculty discussion.**

(Ex. Design - Small Scissor lift design, Thermal – solar plate structure, Robotics – Robotics arm, Machine – Pellet extruder, Entrainment – Rig animation or mini tripod design, or canopy design)

1. Concept selection
2. Material Selection
3. Free Body Diagram
4. *Shear Force Diagram*
5. *Stress calculation*
6. Selection of Beam
7. Bending Moment Diagram
8. Section properties
9. *Concept Design Analysis*
10. *Analysis load behaviour*
11. *Cost Analysis*
12. Visual representation of project / Real time model
13. Presentation

**Text Book(s):**

<b>212MEC2107</b> <b>STRENGTH OF MATERIALS LABORATORY</b>	L	T	P	X	C
	0	0	2	0	1
Prerequisite:	Course Category: Program core courses Course type: Laboratory				

### Course Objectives:

To gain knowledge on various types of methodologies and experimentations to determine the mechanical properties of various engineering materials

### Course Outcomes:

<b>CO1</b>	Determine the compression and hardness test on different materials.
<b>CO2</b>	Analyze the tension and double shear test with mild steel.
<b>CO3</b>	Apply the deflection test on various types of beams.
<b>CO4</b>	Analyse the impact test for different materials.
<b>CO5</b>	Determine the torsional characteristics for the given materials.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>			2		2	2							2	2	
<b>CO2</b>	2		1		1	2							2	1	
<b>CO3</b>	2		1	3							2		1	2	
<b>CO4</b>	3		2	3			2				2	2	2	2	
<b>CO5</b>	2		3	1	2								2	2	

### List of Experiments:

#### Compression and hardness studies

- Compression test on wood

- Compression test on brick
- Brinell hardness test
- Vickers hardness test

### **Shear and tension studies**

- Double shear test on mild steel
- Tension test on rolled TOR steel rod

### **Deflection studies**

- Deflection test on simply supported steel beam (Central point load)
- Deflection test on simply supported steel beam (Two point load)
- Deflection test on simply supported wooden beam (Central point load)
- Deflection test on simply supported wooden beam (Two point load)

### **Impact studies**

- Static bending test on wooden beam
- Impact test on timber (Charpy)

### **Torsion and springs**

- Torsion test on mild steel wire
- Torsion test on mild steel rod
- Deflection test on open coiled and close coiled helical spring

### **Reference(s):**

Strength of Materials Manual prepared by Kalasalingam Academy of Research and Education.

<b>212MEC1108</b> <b>MATERIALS SCIENCE AND ENGINEERING</b>		L	T	P	X	C
		2	0	0	3	3
Prerequisite:		Course Category: Program core course Course type: Theory with X-component				

### Course Objectives:

To impart fundamental ideas about the constituents of engineering materials and their strengthening mechanisms along with their characterization methods.

### Course Outcomes:

<b>CO1</b>	Identify the atomic structure and properties of the materials
<b>CO2</b>	Categorize the various phases in metal alloys
<b>CO3</b>	Identify and select the appropriate heat treatment method to strengthen alloys
<b>CO4</b>	Identify the appropriate applications based on the knowledge on materials properties
<b>CO5</b>	Choose the suitable mechanical testing and methods to evaluate the materials characteristics

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	2	1	2									3	1	
<b>CO2</b>	3		2	3									3	3	
<b>CO3</b>	3	2	1	2									3		
<b>CO4</b>	3	2	2	3									3	2	
<b>CO5</b>	3	3	2										3	3	

## **Course Topics**

### **UNIT I: BASICS**

Types of bonds in crystal structure: ionic, metallic, covalent and Van Der Waals bonding with examples. Crystal structures: type of crystal structures, bravais lattice - miller indices, atomic packing factor and APF for different crystal structures. Defects: types of defects, defects in atomic scale, one dimensional defects, surface defects indicating slip and twin in the microstructure. Mechanical behaviour of materials: mechanism of plastic deformation, slip, twinning, stacking faults, deformation bands and strain hardening

### **UNIT II: CONSTITUTION OF ALLOYS**

Solid solution: solid solutions - substitutional and interstitial. Constitution of alloys: phase diagrams, isomorphous, eutectic, peritectic, eutectoid and peritectic reactions, iron – iron carbide equilibrium diagram – binary alloys. classification of steel and cast iron – microstructure, properties, and applications

### **UNIT III: HEAT TREATMENT**

Annealing - full annealing, stress relief, recrystallisation and spheroidizing – normalizing - hardening and tempering of steel - isothermal transformation diagrams – cooling curves superimposed on I.T. diagram - hardenability, jominy end quench test – austempering, martempering – case hardening - carburising, nitriding, cyaniding, carbonitriding – flame and induction hardening.

### **UNIT IV: METALS AND ALLOYS**

Mechanical properties and applications - Nickel and nickel alloys, Copper and copper alloys, aluminum and alloys – polymers – synthesis and properties, ceramics – size dependence of properties – chemical, optical, vibrational, thermal, electrical, magnetic and mechanical properties of materials.

### **UNIT V: MECHANICAL TESTING AND CHARACTERISATION METHODS**

Mechanical testing of materials for various types of loads – types of fracture – hardness tests (Brinell, Vickers and Rockwell), impact test- Izod and Charpy – fatigue and creep test. tribological properties of metals and non-metals – advanced characterization techniques - electron imaging of materials (SEM and TEM), techniques and applications of Scanning Probe Microscopies – principle and use of spectroscopies

## **X Component**

1. Sample preparation following ASTM standard procedure for metallurgical polishing and etching for microstructure analysis.

2. Identification of different phases in metals and alloys through microstructural analysis.
3. *Phase change analysis on different weldments. Samples are steel with steel, steel with copper, steel with nickel.*
4. *Identification of different phases on paraffin with different nano – reinforcements.*
5. Bulk heat treatment and quenching of metals in different mediums (water, oil, salt and in air) for hardness measurement.
6. Surface modifications and hardness measurements on metals using weld cladding
7. Electrochemical corrosion and / or wear study on clad samples.
8. *Develop composite materials through moulding processes*
9. *Develop metals / MMC through casting (Stir / Centrifugal / Powder compaction)*
10. Selection of suitable mechanical testing techniques to evaluate the quality of the materials developed.
11. Selection of suitable metallurgical characterisation techniques to evaluate the quality of the materials developed.

<b>212MAT1109</b>		L	T	P	X	C
<b>PARTIAL DIFFERENTIAL EQUATIONS, FOURIER TRANSFORM AND NUMERICAL METHODS</b>		2	0	2	0	3
Prerequisite: NA		Course Category: Program core courses Course type: Theory with Practical				

### Course Objectives:

To understand the concepts of partial differential equations, fourier transforms and to find derivative and integrals using numerical methods

### Course Outcomes:

<b>CO1</b>	Be able to perform basic computations related to fourier, sine and cosine transforms
<b>CO2</b>	Understand the different types of partial differential equations and the methods to solve them
<b>CO3</b>	Use partial differential equations to relate to string theory and heat transfer problems
<b>CO4</b>	Be able to realize and perform different numerical methods to find solutions to systems of linear equations
<b>CO5</b>	Be able to realize and perform different numerical methods to determine the derivative and integral of functions

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	1	1			3					2			1		1
<b>CO2</b>	2	1			3					2					1
<b>CO3</b>	3	1			3					2			3		1
<b>CO4</b>	3	1			3					2			1		1
<b>CO5</b>	3	1			3					2			1		1

## **Course Topics**

### **UNIT I: FOURIER SERIES**

Fourier series – Half range sine and cosine series - Fourier integral theorem (without proof) - Fourier transform pair - Sine and Cosine transforms – Properties - Transforms of simple functions – Convolution theorem - Parseval's Identity

### **UNIT II: PARTIAL DIFFERENTIAL EQUATIONS**

First order partial differential equations, solutions of first order linear and nonlinear PDEs. Solution to homogeneous and nonhomogeneous linear partial differential equations second and higher order by complementary function and particular integral method.

### **UNIT III: APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS**

Flows, vibrations and diffusions, second-order linear equations and their classification, Initial and boundary conditions, solution of the wave equation and diffusion equation by the method of separation of variables, The Laplacian in plane, cylindrical and spherical polar coordinates and solutions.

### **UNIT IV: SOLVING SYSTEM OF EQUATIONS**

Errors in Numerical Computation - Iteration method – Regula Falsi Method - Newton-Raphson Method - Simultaneous Equations-Back Substitution Gauss Elimination Method-Gauss' Jordan Elimination Method-Iterative methods- Gauss Jacobi Iteration Method – Gauss–Seidel Iteration Method.

### **UNIT V: DIFFERENCE OPERATORS AND APPLICATIONS**

Difference Operators - Forward difference Table- Properties of the Operator - Backward Differences – Central Difference Operator. Derivatives using Newton's forward Difference Formula and Newton's Backward Difference Formula – Derivatives using Central Difference Formulae. Numerical Integration - Newton – Cotes quadrature formula – Trapezoidal rule – Simpson's one third rule – Simpson's three eight rule

#### **Practical:**

##### **Unit I**

Fourier series

Sine and Cosine transforms

Convolution theorem

##### **Unit II**

Partial derivative of polynomials with two variables

Homogeneous and nonhomogeneous linear partial differential equations

Solution of higher order partial differential functions

### **Unit III**

Classification of partial differential equations

Solution of wave equation, Solution of heat equations

### **Unit IV**

Newton Raphson

Regula Falsi method

Gauss Elimination

Gauss Jordan method

Gauss Jacobi

### **Unit V**

Newton's forward Difference Formula and Backward Difference

Trapezoidal rule

Simpson's one third rule

Simpson's three eight rule

<b>212MEC1310</b> <b>FUNDAMENTALS OF MECHATRONICS SYSTEM</b>	L	T	P	X	C
	2	0	2	0	3
Prerequisite: Nil	Course Category: Program Core Course type: Theory with Practical				

### Course Objectives:

Aim of this course is to educate students about an integrated approach for the design of complex engineering systems and to provide knowledge of sensors, actuators

### Course Outcomes:

<b>CO1</b>	Interpret the needs for models of systems in order to predict their behavior
<b>CO2</b>	Understand the requirements of signal conditioning and pulse modulation
<b>CO3</b>	Analysis the characteristics of various actuation systems
<b>CO4</b>	Describe the structure of microcontroller to carry out the tasks
<b>CO5</b>	Describe the linear and non-linear relationship models for various system blocks

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>

<b>CO3</b>	2	2	2	1			1		2			2	2		
<b>CO4</b>	2	2	2				2	1			1		2		2
<b>CO5</b>	3									2	1		1	1	2

### Course Topics

#### UNIT I: BASIC MECHATRONICS

Design process, measurement systems, control systems, programmable logic controller, sensors and transducers – performance terminology, displacement, position, proximity, force, velocity, motion, fluid pressure, liquid flow, liquid level, temperature, light sensors, selection of sensors and switches.

## **UNIT II: SIGNAL CONDITIONING**

Signal conditioning, operational amplifier, protection, filtering, Wheatstone bridges, pulse modulation, digital signals, analog and digital signals, digital to analog, analog to digital, multiplexers and data acquisition.

## **UNIT III: ACTUATION SYSTEMS**

Pneumatic and hydraulic actuation system, directional control valves, pressure control valves, cylinders, servo and proportional control valves, process control valves, rotary actuators, mechanical systems-kinematic chain, cams, gears, ratchet and pawl, belt and chain drives, bearings, mechanical aspects of motor selection.

## **UNIT IV: MICROPROCESSOR AND INTERFACING**

Microprocessor systems, microcontrollers, application, programming, interfacing of peripheral device, keyboard and display interfacing, ADC, DAC, input and output addressing, interface requirements, peripheral interface requirements, serial communication interface.

## **UNIT V: SYSTEM MODELS**

Mathematical model, mechanical system building blocks, electrical system building blocks, fluid system building blocks, thermal system building blocks, rotational –translational system, Electromechanical system and Hydraulic mechanical systems.

### **Practical:**

1. Sensor/Transducer
2. Implementation of Inverting and Non-inverting Amplifier using Op-Amp
3. Implementation of Instrumentation Amplifier using Op-Amp
4. Study of Analog to Digital Converter
5. Study of Digital to Analog Converter
6. Study of Multiplexer
7. Design and testing of fluid power circuits to control Velocity, direction and force of single and double acting actuators
8. Design of circuits with logic sequence using Electro pneumatic trainer kits.
9. Simulation of basic Hydraulic, Pneumatic and Electric circuits using software
10. Computerized data logging system with control for process variables like pressure flow and temperature.
11. Servo controller for open and closed loop
12. Speed control of DC motor with a Microprocessor or Microcontroller
13. Stepper motor control with a Microprocessor or Microcontroller
14. Modeling and analysis of basic electrical, hydraulic and pneumatic systems using LAB VIEW

<b>212MEC2311</b> <b>THERMAL ENGINEERING</b>		L	T	P	X	C
		2	1	2	0	4
Prerequisite: Thermodynamics (MEC21RXXX)		Course Category: Program core course Course type: Theory with Practical				

### Course Objectives:

To understand dynamics involved in thermal energy transformation and to apply thermodynamics laws upon gas power cycles followed by performance analysis of reciprocating ideal air compressor

### Course Outcomes:

<b>CO1</b>	Outline the fundamental concepts of gas power cycles
<b>CO2</b>	Enumerate the implications of Internal combustion Engine
<b>CO3</b>	Employ the basic concepts behind steam nozzles and turbines
<b>CO4</b>	Analyse and acquire solutions to the problems involved in the air compressors
<b>CO5</b>	Apply the basics of thermodynamics on Refrigeration

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	3						1				1	3	2	
<b>CO2</b>	3	3						1				1	3	2	
<b>CO3</b>	3	3						1				1	3	2	
<b>CO4</b>	3	3						1				1	3	2	
<b>CO5</b>	3	3						1				1	3	2	

### Course Topics

#### UNIT I: GAS POWER CYCLES

Air standard Otto, Diesel and Dual cycles -Air standard Brayton cycle –Calculation of mean effective pressure and air standard efficiency, effect of reheat, regeneration and intercooling.

## **UNIT II: ENGINE AUXILIARY SYSTEMS**

Engine Components - Working principles and types of carburetors, ignition systems, fuel pumps and injectors, MPFI, CRDI, lubricating and cooling systems; Super and turbocharging. Hybrid and Electric engines.

## **UNIT III: NOZZLES, DIFFUSER AND TURBINES**

Flow of steam through nozzles & Shape of nozzles - Effect of friction - Critical pressure ratio – Supersaturated flow - Steam turbine – Impulse and Reaction principles - Compounding, velocity diagrams for simple and multistage turbines.

## **UNIT IV: AIR COMPRESSOR**

Reciprocating compressors, Effect of clearance and volumetric efficiency. Adiabatic, Isothermal and Mechanical efficiencies, staging of reciprocating compressors, optimal stage pressure ratio, effect of intercooling, minimum work for multistage reciprocating compressors

## **UNIT V: REFRIGERATION**

Reversed Carnot cycle, Reversed Brayton cycle - Refrigerating effect -Power required, Unit of refrigeration, COP - Refrigerants and their desirable properties; Vapor compression refrigeration system - Vapor absorption refrigeration system.

### **Practical:**

#### **Unit 1**

Performance test on four stroke diesel engines

#### **Unit 2**

Port timing diagram of Two stroke Engine

Valve timing diagram of four stroke diesel engine

#### **Unit 3**

Effect of heterogeneous steam flow through nozzles

#### **Unit 4**

Performance test on single stage air compressor

Performance test on two stage air compressors

#### **Unit 5**

Calculate the viscosity of lubricating oil using open and closed cup apparatus.

Determine the flash and fire point for kerosene and diesel.

**Text Book(s):**

3. Rudramoorthy R, "Thermal Engineering", 3rd Edition, Tata McGraw Hill Publishers, 2017

## **Course Topics**

### **UNIT I: MECHANISM OF METAL CUTTING**

General principles – chip formation – shear plane – cutting ratio – shear angle – shear strain - (force relations (orthogonal and oblique) – force system in orthogonal (merchant circle diagram) – thermal aspects of machining – tool wear and tool life.

### **UNIT II: CUTTING TOOLS AND MACHINING**

Cutting tool materials – types of tools (single / multi) - turning, various lathe operations – milling – various milling operations – design of lathe structures (bed, column, housing, base, table).

### **UNIT III: CNC TURNING AND MILLING**

Introduction – historical background – anatomy of CNC turning and milling. CNC part programming manual part programming – computer assisted part programming.

### **UNIT IV: DESIGN CONSIDERATIONS OF CNC**

Design of slider and slide ways – ball bearing – selection of variable drives – selection of stepper motor – design of ball screw – selection of transducer.

### **UNIT V: ADVANCED MACHINING PROCESS**

Chemical machining – electro chemical machining – wire EDM – laser beam machining – EBM – plasma arc machining – hard turning and high speed machining.

## **Practical:**

### **Unit 1**

Plain turning and Taper turning  
External Thread Cutting  
Thermal Effects of machining

### **Unit 2**

Contour milling using vertical milling machine  
Spur gear cutting in milling machine

### **Unit 3**

Code and execute a suitable CNC program for milling  
Code and execute a suitable CNC program for turning

### **Unit 4**

Survey of items (threads, bearings, housing etc) required for the fabrication of table top CNC machine

## **Unit 5**

Determine machinability of various materials in Abrasive water jet machining

### **X component:**

1. Determination of the cutting force using lathe tool dynamometer during various operations
2. *Modelling of lathe structures*
3. Compile a CNC program for machining a product as prescribed and machine the same.
4. *Fabrication of tabletop CNC machine*
5. Experimentation of EDM and abrasive water jet machining

<b>212MEC2113</b> <b>DESIGN OF MACHINE ELEMENTS</b>			L	T	P	X	C
			2	1	0	0	3
Prerequisite: Strength of Materials (MEC21RXXX)		Course Category: Program core course Course type: Theory with Tutorial					

### Course Objectives:

To introduce design procedures, industrial standards and theories of failure leading to machine component design as solutions for complex problems

### Course Outcomes:

<b>CO1</b>	Solve simple stresses and theories of failures in machine components
<b>CO2</b>	Design shafts, keys and couplings for power transmission
<b>CO3</b>	Estimate the load carrying capacity of threads and welds joints
<b>CO4</b>	Design springs for different automotive and machine components
<b>CO5</b>	Analyze the pressure distribution and design journal bearing

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	3	2	1		1				1			2	2	1
<b>CO2</b>	3	3	3	1		1				1			2	3	1
<b>CO3</b>	3	3	2	1		1				1			2	2	1
<b>CO4</b>	3	3	3	1		1				1			2	2	1
<b>CO5</b>	3	3	2	1		1				1			2	2	1

### Course Topics

#### UNIT 1: STRESS ANALYSIS AND THEORIES OF FAILURES

Basics in Engineering Design – standard size, preferred numbers, fits and tolerances – Types of simple stresses – static and varying loading – combined loading – theories of failures – allowable stress – factor of safety – stress concentration factor – fluctuating stress- design for combined fatigue loading Soderberg, Goodman and Gerber relations

## **UNIT 2: DESIGN OF COUPLINGS AND SHAFTS**

Design principles of shafts – static, fatigue loading – critical speed. Design of keys. Design of couplings – flexible couplings and Rigid Couplings.

## **UNIT 3: DESIGN OF TEMPORARY AND PERMANENT JOINTS**

Welded joints: Types of welded joints- weld symbols, strength of welds- centrally loaded joints- axially loaded joints-eccentrically loaded joints. Threaded joints: I.S.O. Metric screw threads- threaded joints in tension fluctuating load- torque requirement for tightening and eccentrically loaded bolted joints.

## **UNIT 4: DESIGN OF SPRINGS**

Helical springs and leaf springs: Stresses and deflection in helical springs. Design of leaf springs- stress and deflection - exercise problems in springs used for automobiles

## **UNIT 5: DESIGN OF BEARINGS**

Sliding contact bearings: Theory of lubrication- hydrodynamic bearings-Sommer field number- design of hydrodynamic bearings. Rolling contact bearings: Static and dynamic load capacity- cubic mean load- variable load-probability of survival- selection of deep groove and angular contact ball bearings.

<b>212MEC2314</b> <b>FINITE ELEMENT ANALYSIS</b>		L	T	P	X	C
		2	0	2	3	4
Prerequisite: Nil		Course Category: Program core course Course type: Theory and Practical with X-component				

### Course Objectives:

To gain knowledge about basic principles of finite element analysis procedure and apply the finite element principles into structural, thermal, and dynamic problems.

### Course Outcomes:

<b>CO1</b>	Solve structural problems by formulating governing equations and boundary conditions
<b>CO2</b>	Relate the concept of one dimensional problems to solid mechanics and heat transfer applications.
<b>CO3</b>	Apply the two dimensional equations to applications such as plane stress & strain, plate and shell etc.
<b>CO4</b>	Perform numerical analysis and simulation of iso-parametric structures.
<b>CO5</b>	Examine the finite element concept to various vibrations and torsional applications.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>

<b>CO3</b>	3	3	2	2	3				2			2	3	1	1
<b>CO4</b>	3	3	2	2	3				2			2	3	1	1
<b>CO5</b>	3	3	2	2	3				2			1	3	1	1

## **Course Topics**

### **UNIT I: INTRODUCTION**

Historical Background, Mathematical modelling of field problems in engineering, governing equations, discrete and continuous models, boundary and Eigenvalue problems, Weighted Residual Methods, Variational formulation of boundary value problems, Ritz technique, Basic concept of Finite Element Method.

### **UNIT II: ONE DIMENSIONAL PROBLEMS**

One dimensional second order equation, discretization, linear and higher order elements, derivation of shape functions, Stiffness matrix and force vectors, assembly of elemental matrices, solution of problems from solid mechanics and heat transfer.

### **UNIT III: TWO DIMENSIONAL PROBLEMS**

Two dimensional equations, variational formulation, finite element formulation, triaelements-shape functions, elemental matrices and RHS vectors; application to thermal problems, Plane stresses and plane strain problems, body forces and thermal loads, plate and shell elements.

### **UNIT IV: ISOPARAMETRIC ELEMENTS FORMULATION**

Natural coordinate systems, isoparametric elements and shape functions, numerical integration and application to plane stress problems, matrix solution techniques, solution of dynamic problems, and introduction to FE software using commercial finite element packages like Abaqus and Hypermesh.

### **UNIT V: VIBRATION AND TORSION PROBLEMS**

Longitudinal vibration and mode shapes, fourth order beam equation, transverse deflections and natural frequencies, Torsion of non-circular shafts, quadrilateral and higher order elements

#### **Practical:**

#### **UNIT 1:**

Analysis of Cantilever beams

Analysis of simply supported and Fixed end beams (Different loading conditions)

#### **UNIT 2:**

Analysis the static deflection and Von Mises stress of one-dimensional element

Heat transfer analysis of chimney

### **UNIT 3**

Stress Analysis of a rectangular plate with a circular hole.

Composites laminated plate analysis using Shell Element

Analysis of 2D-heat sink

### **UNIT 4:**

Numerical integration of discrete experimental data in mat lab.

Plane stress / Plane strain analysis

### **UNIT 5**

Determination of Natural Frequency of Free-Free Beam.

Mode frequency analysis of beams.

### **X-Component.**

1. Workbench 3D analysis of cantilever and fixed beam with different Channel section
2. *Analysis of one dimensional frame / truss structure using ANSYS.*
3. Analysis of heat transfer in Vehicle Silencers.
4. Railway beam under the influence of thermal stresses.
5. *Analysis of crane hooks using ANSYS workbench.*
6. *Buckling analysis of column structures.*
7. Harmonic Analysis of suspension spring
8. Natural frequency and damping analysis of hollow shaft

<b>212MEC2315</b> <b>THEORY OF MACHINES</b>		L	T	P	X	C
		2	0	2	3	4
Prerequisite:		Course Category: Program core course Course type: Theory and Practical with X-component				

**Course Objectives:**

To understand the velocity and acceleration analysis of basic mechanisms and to familiarize with the process of balancing, analysis of vibrations

**Course Outcomes:**

<b>CO1</b>	Ability to apply the knowledge of simple mechanisms in real time applications by fabricating it.
<b>CO2</b>	Create and analyze the velocity and acceleration of various mechanisms by applying relative principle
<b>CO3</b>	Design, develop and analyze the profile of CAM for any applications.
<b>CO4</b>	Apply the concept of balancing and use it for reducing the unbalanced forces in rotating masses and reciprocating engines
<b>CO5</b>	Apply various principles of vibrations of different systems to minimize vibrations and Calculating gyroscopic couple on various vehicles

**Mapping of Course Outcomes:**

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	3	3				2		2	2		1	2	3	
<b>CO2</b>	3	2	3	2	2				1	1		1	2	3	1
<b>CO3</b>	3	3	3	3	2		2		2	2		1	2	3	
<b>CO4</b>	3	2	2	2	2	1		1				1	2	3	1
<b>CO5</b>	3	3	3	3	3			2		2		1	2	3	

## **Course Topics**

### **UNIT I: BASICS OF MECHANISMS**

Classification of mechanisms- Basic kinematic concepts and definitions- Degree of freedom, mobility- Grashof's law, Kutzbach criterion, Gruebler's criterion, Kinematic inversions of four bar chain and slider crank chains- Limit positions- Mechanical advantage- Transmission angle- Description of some common mechanisms, straight line generators-Indexing Mechanisms, Steering gear mechanisms such as Davis and Ackermann Steering gear.

### **UNIT II: KINEMATICS**

Displacement, velocity and acceleration analysis of simple mechanisms, graphical velocity analysis using instantaneous centers - slider crank mechanism dynamics Coincident points- Coriolis component of acceleration- introduction to linkage synthesis three position graphical synthesis for motion and path generation-Virtual work principles for simple mechanism.

### **UNIT III: CAM PROFILES AND GEAR**

Classifications - Displacement diagrams - Parabolic, Simple harmonic and Cycloidal motions - Graphical construction of displacement diagrams and layout of plate cam profiles - circular arc and tangent cams. Classification of gears - Gear tooth terminology - Fundamental Law of toothed gearing and involute gearing - Length of path of contact and contact ratio

### **UNIT IV: BALANCING OF MACHINES AND GOVERNOR**

Static and dynamic balancing - balancing of rotating masses - balancing a single cylinder engine, balancing of multi cylinder engines. Governors Types Centrifugal governors Gravity controlled and spring controlled centrifugal governors Characteristics Effect of friction.

### **UNIT V: VIBRATION AND CONTROL MECHANISM**

Basic features of vibratory systems - Basic elements and lumping of parameters - Degrees of freedom – Single degree of freedom - Free vibration - Equations of motion - natural frequency - Types of Damping -critical speeds of shaft - Gyroscopes -Gyroscopic couple - Gyroscopic stabilization - Gyroscopic effects in aeroplanes and ships

### **Practical:**

#### **Unit 1**

Links, degree of freedom, pair - Shaper, Slotter, Planing machine mechanism  
Davis and Ackermann Steering gear

## **Unit 2**

Analysis of single slider crank mechanism using Mechanalyzer

## **Unit 3**

Lathe gearbox - Measurement and representation through modelling (freehand sketch)

Determination of critical speed of cam

## **Unit 4**

Determination of speed and sensitivity of a Porter governor

Determination of speed and sensitivity of a Proell governor

Determination of speed and sensitivity of a Hartnell governor

## **Unit 5**

Determination of Natural Frequency of Transverse Vibration of a Free-Free Beam

Determination of Critical Speed of a Shaft using Whirling Apparatus

Determination Time period oscillation of simple pendulum

## **X – Component**

1. Design and development of four bar mechanism using linkage software
2. Design and development of a single slider mechanism using linkage software
3. Design and simulation of indexing mechanism
4. *Analysis of 4-bar chain mechanism using MechAnalyzer*
5. *Analysis of double slider crank mechanism using MechAnalyzer*
6. Modelling of lathe gearbox assembly using NX cad
7. Simulation and contact stress analysis of lathe gearbox assembly
8. *Balancing of multiple mass in multiple plane*
9. *Design and simulation of mechanical governors*
10. Vibrations analysis of cantilever beams with various materials using single axis accelerometer, DAQ and Dewesoft

<b>212MEC2316</b> <b>HEAT AND MASS TRANSFER</b>		L	T	P	X	C
		2	0	2	3	4
Prerequisite: Engineering (MEC21RXXX)	Thermal	Course Category: Program core course Course type: Theory and Practical with X component				

### Course Objectives:

To understand various modes of heat transfer studies with analytical, experimental and numerical approaches

### Course Outcomes:

<b>CO1</b>	Apply and interpret the radical concepts on steady and transient state heat conduction problems
<b>CO2</b>	Solve free and forced convection problems using correlations and perform experimentation
<b>CO3</b>	Investigate the phenomenon of boiling, condensation and heat exchanger equipment design
<b>CO4</b>	Conduct and investigate the basic occurrence of radiational concepts
<b>CO5</b>	Interpret the fundamental concepts on mass transfer and cooling of electronic equipment

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>

<b>CO2</b>	3	3	1	2	2				2	2		2	3		2
<b>CO3</b>	3	3	2	2	2				2	2		2	3	2	2
<b>CO4</b>	3	3	3	2	2				2	2		3	3	2	2
<b>CO5</b>	3	2	2	2	2				2	2		2	2	2	

## **Course Topics**

### **UNIT I: CONDUCTION**

Modes of heat transfer – Fundamental Laws - Applications - Thermal contact resistance; Overall heat transfer coefficient. One dimensional steady state conduction in simple geometries - General equation of heat conduction in Cartesian, cylindrical and spherical coordinates - Conduction in plane wall, cylindrical and spherical shells; Electrical analogy; Conduction in composite walls and shells; Critical thickness of insulation; Heat transfer through fins; Unsteady state heat transfer – Systems with negligible internal resistance -lumped heat capacity analysis; Infinite bodies; Semi-infinite bodies.

### **UNIT II: CONVECTION**

Mechanism of convection - classification - Types of Flow - non-dimensional numbers in heat transfer; Boundary layer concepts for flow over a flat plate and flow through circular pipes; Forced convection - External flow over flat plate, cylinder, sphere and bank of tubes; Internal flow through circular pipes; Natural convection: Steady one-dimensional flow over vertical, horizontal plates, horizontal cylinders and spheres; combined free and forced convection.

### **UNIT III: CONVECTIVE PHASE CHANGE HEAT TRANSFER AND HEAT EXCHANGERS**

Condensation and boiling – boiling modes, correlations, forced convection boiling, laminar film condensation on a vertical plate, turbulent film condensation; Heat exchangers – design procedure for heat exchanger - LMTD and NTU analysis, fouling factor, effectiveness.

### **UNIT IV: RADIATION**

Thermal Radiation - Black body and real surface radiation; Radiation properties and governing laws; Radiation heat transfer - view factor and its relations - Radiation heat exchange between black and gray surfaces, Radiosity - Radiation shields and the radiation effects.

### **UNIT V: MASS TRANSFER AND COOLING OF ELECTRONIC EQUIPMENTS**

Mass transfer – Fick's law of diffusion, diffusion mass transfer, forced convective mass transfer, heat and mass transfer analogies; Manufacturing of electronic equipment; Conduction in Cooling - Chip Carriers - PCB - TCM; Air cooling in forced and Natural convection.

## **Practical**

### **Unit 1**

Determination of thermal conductivity of insulating powder.

Determination of overall heat transfer coefficient using composite wall apparatus.

Determination of thermal conductivity using Lagged Pipe apparatus

## **Unit 2**

Determination of heat transfer coefficient in natural convection mode.

Determination of heat transfer coefficient in forced convection mode.

Determination of heat transfer coefficient in natural convection mode in pin-fin apparatus.

Determination of heat transfer coefficient in forced convection mode in pin-fin apparatus.

## **Unit 3**

Determination of effectiveness of Parallel flow heat exchanger.

Determination of effectiveness of counter flow heat exchanger

## **Unit 4**

Determination of emissivity using emissivity apparatus.

Determination of Stefan Boltzmann constant using test rig.

## **Unit 5**

Determination of drying efficiency in relevance to air flow using an air dryer.

Determination of diffusivity using diffusion measurement apparatus.

## **X component**

1. CFD analysis of flow and heat transfer through conduction of plane walls
2. CFD analysis of flow and heat transfer in natural and forced convection
3. CFD Fluent - Design and analysis of flow and heat transfer in double pipe heat exchangers
4. Design a micro channel for heat transfer study.
5. Characteristic studies on solar flat plate and trough collectors.

# PROGRAM ELECTIVE COURSES

Common for  
“Digital Manufacturing & Industry 4.0”  
“Mechatronics & Automation”  
And  
Automotive System Engineering

<b>MEC21XXX</b> <b>BASICS OF ROBOTIC SIMULATION</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To provide an overview of electronic devices and robotics simulations concepts

### Course Outcomes:

<b>CO1</b>	Understand the principles of simulation and its environment.
<b>CO2</b>	Design a replication of actual manufacturing process
<b>CO3</b>	Understand the importance of robotics in production line
<b>CO4</b>	Understand the standard engineering manufacturing process in a simulation environment.
<b>CO5</b>	Learn the application of robotics in multiple domains

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	1										1	3		
<b>CO2</b>		3	2				1					2	2	2	2
<b>CO3</b>	1	2											3	3	3
<b>CO4</b>		3										3	2		
<b>CO5</b>		3					2					3	2		

### Course Topics

#### UNIT I: INTRODUCTION TO SIMULATION ENVIRONMENT

Basic Environment - Study creation - Creating sequences of simulative operations - Collision detection - Section cutting - Video and picture output

#### UNIT II: KINEMATICS

Defining kinematic devices

#### Unit III: ROBOT AUTOMATION

Defining and simulating robotic spot welding - Pneumatic and servo gun definition and usage - pedestrian welding and Gun on robot path development

#### **UNIT IV: SIMULATION**

Defining and simulating robotic continuous applications - Arc welding and grinding path development

#### **UNIT V: APPLICATION**

Defining and simulating robotic material handling- Gripper definition and usage- Pick and place path development.

#### **Additional Topics:**

Multi-robot simulation (i.e. interference zones) - Swept volumes, 7th axis, etc

#### **Text Book:**

1. M.O. Tokhi , "Flexible Robot Manipulators: Modelling, simulation and control (Control, Robotics and Sensors)", Institution of Engineering and Technology; 2nd edition, 2017.

<b>MEC21XXX</b> <b>SYNCHRONOUS MODELLING WITH NX CAD</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To enable the students about modelling and assembly of machine components

### Course Outcomes:

<b>CO1</b>	Demonstrate various drawing conventions, abbreviations and their usage
<b>CO2</b>	Apply the knowledge of dimensioning, fits and tolerance in industrial sectors
<b>CO3</b>	Draw machine element using NX designer tools
<b>CO4</b>	Outline the drawing principles of synchronous modelling
<b>CO5</b>	Combine the various drawn parts of the component into assembled view

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	1	2	3						1	3			2		1
<b>CO2</b>	3	1	3		1				3	3		1	3	1	2
<b>CO3</b>	3	1	3		1				3	3			3		2
<b>CO4</b>	3	1	3		1				3	3			3	1	2
<b>CO5</b>	3	1	3		1				3	3			3	1	3

### Course Topics

#### UNIT I: NX ADVANCED USER

Working with existing parts-Hole features -Expressions -Coordinate systems -Part Navigator - Associative -copies -Face and edge operations -Basic freeform -Creating and modifying assemblies

Assembly Constraints - Assembly Arrangements -Reference Sets -Interpart geometry and references -Component arrays -Reuse Library -Revise and replace components

#### UNIT II: SYNCHRONOUS MODELLING

Documenting design intent (Feature Groups, Product Interfaces) - Editing parametric models (Replace features, Suppression by Expression, model updates) - Associative curve operations (Project, Join, Intersect, Wrap/Unwrap, Text)

Emboss geometry (Emboss Body, Emboss, Offset Emboss) -Blending techniques (Advanced Edge Blend options, Face blends) - Interpart references (Interpart Expressions, Overriding Expressions) - Capturing part shape variations (Deformable Parts) - Design optimization (Optimization Study, Local and Global algorithms)

Intro to Synchronous modeling (Move, Pull, Replace, Delete Face) - Modifying detail features using Synchronous (Resize Blend, Chamfer, Replace Blend) - Reusing and relating faces using Synchronous (Pattern Face, Copy/Paste Face, Dimensions) - Optional: History-Free Synchronous (Optimize Face, Adaptive)

**Text Book:**

1. Jože Duhovnik , Ivan Demsar, Primož Drešar , "Space Modeling with SolidWorks and NX", Springer, 2015.

3. NX 10 Tutorial: Sketching, Feature Modeling, Assemblies, Drawings, Sheet Metal, and Simulation basics, 2015.

<b>MEC21XXX FACTORY CAD</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with Practical				

### Course Objectives:

The aim of this course is to develop basic understanding of plant layout and material handling

### Course Outcomes:

<b>CO1</b>	Outline the basics of factory CAD and their importance.
<b>CO2</b>	Develop the modelling of smart objects using the tools
<b>CO3</b>	Create the facility to importing the objects developed by the tools
<b>CO4</b>	Ability to analyze the various models created and prepare the documents
<b>CO5</b>	Outline various machines and material handling processes

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	3	2			2	2				1			2	
<b>CO2</b>	3	3	3		2	2	1						2	3	
<b>CO3</b>		3	2		3						1	1		2	
<b>CO4</b>	2	2	3	3	1						3				
<b>CO5</b>	1	3		1			2				1			2	

### Course Topics

#### UNIT I: BASICS OF FACTORY CAD

Smart factory objects - Creating an new facility layout - Exporting a layout to a visualization program

#### UNIT II: CREATION OF SMART OBJECTS

Layer organization and standards - Creating generic tool objects

### **UNIT III: CREATION OF LIBRARIES AND IMPORTING OBJECTS**

Using the Factory Explorer and Factory libraries - Importing tooling and product geometry

### **UNIT IV: ANALYSE AND DOCUMENTATION**

Analyzing and documenting space use - Animating within Factory CAD - Building custom parametric objects

### **UNIT V: MACHINES AND MATERIAL HANDLING**

Converting 2D outlines to 3D objects - Building systems from custom objects - Querying drawing objects.

PROGRAM ELECTIVE  
COURSES  
(Digital Manufacturing &  
Industry 4.0)

<b>MEC21XXX</b> <b>ADDITIVE MANUFACTURING</b>	L	T	P	X	C
	3	0	2	0	4
Prerequisite: Nil	Course Category: Professional Elective Course type: Theory with Practical				

**Course Objectives:**

To understand the 3D printing principles and methods

**Course Outcomes:**

<b>CO1</b>	Understand the principles of 3D Printing technique
<b>CO2</b>	Illustrate the methods of modelling and correction in 3D volumes
<b>CO3</b>	Apprehend the principles of finishing and materials

**Mapping of Course Outcomes:**

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2		1		1						2		2	1	
<b>CO2</b>	2		1		2						2		2	1	
<b>CO3</b>	2		3		3						2		2	2	1

**Course Topics**

**UNIT I: BASICS**

Introduction to 3D printing techniques FDM, SLA, SLS, Generation of .stl format for 3D volume

**UNIT II: MODELLING OF OBJECTS**

Examination of Errors – holes, faces normal, self-intersections, noise shells, manifold errors, Repairing of Errors according to technique selection, Finishing and thread control

**UNIT III: MATERIAL MOVEMENT AND UNITS**

Materials and 3D printing- Introduction to white light scanning- Operation of Printer software controls and rectifications of model

**Text Book:**

**List of Experiments**

Modeling and printing of

1. Impossible box
2. Race Car
3. Differential gear
4. Jewelry die using resin printer
5. Mould for casting using resin printer

<b>MEC21XXX</b> <b>INDUSTRIAL INTERNET OF THINGS</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To impart the principles of internet of things towards various industrial applications

### Course Outcomes:

<b>CO1</b>	Understand the basics and structure of internet of things
<b>CO2</b>	Illustrate the characteristics of IoT sensors of first and advanced generations
<b>CO3</b>	Outline the various modules of IoT systems
<b>CO4</b>	Apply the industrial IoT principles for various applications
<b>CO5</b>	Able to apply the concepts of IoT to various projects

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	2		1	1							2	2	2	1
<b>CO2</b>	2	2		2	2							2	2	1	
<b>CO3</b>	1	2		1	2							2	1	2	1
<b>CO4</b>	2	1		2	2							1	1	2	1
<b>CO5</b>	2	1		2	1							2	1	2	2

### Course Topics

#### UNIT I: INTRODUCTION

Internet of Things Promises–Definition– Scope–Sensors for IoT Applications–Structure of IoT–IoT Map Device.

#### UNIT II: IOT SENSORS

Industrial sensors – Description & Characteristics–First Generation – Description & Characteristics– Advanced Generation – Description & Characteristics–Integrated IoT Sensors – Description & Characteristics–Polytronics Systems – Description & Characteristics–Sensors'

Swarm – Description & Characteristics–Printed Electronics –Description & Characteristics–IoT Generation Roadmap.

### **UNIT III: TECHNOLOGICAL ANALYSIS**

Wireless Sensor Structure–Energy Storage Module–Power Management Module–RF Module–Sensing Module.

### **UNIT IV: IOT DEVELOPMENT EXAMPLES**

ACOEM Eagle – En Ocean Push Button – NEST Sensor – Ninja Blocks -Focus on Wearable Electronics.

### **UNIT V: IOT PROJECTS**

Creating the sensor project - Preparing Raspberry Pi/ ARM Cortex - Clayster libraries - Hardware  
Interacting with the hardware - Interfacing the hardware- Internal representation of sensor values - Persisting data - External representation of sensor values – Exporting Sensor data  
- Creating the actuator project- Hardware - Interfacing the hardware -Creating a controller - Representing sensor values - Parsing sensor data – Calculating control states - Creating a camera  
- Hardware -Accessing the serial port on RaspberryPi/ ARM Cortex - Interfacing the hardware - Creating persistent default settings – Adding configurable properties - Persisting the settings - Working with the current settings -Initializing the camera.

#### **Text Book:**

#### **Reference:**

1. Sabina Jeschke, Christian Brecher, Houbing Song , Danda B. Rawat, "Industrial Internet of Things: Cybermanufacturing Systems", Springer, 2018.
2. Alasdair Gilchrist , "Industry 4.0: The Industrial Internet of Things", Apress, 2019.

#### **Practical:**

1. Automatic Human Trolley
2. Solar and Smart Energy System
3. Machine Health Monitoring System

Other experiments can be framed based on the demand at the time of studying

<b>MEC21XXX</b> <b>BIG DATA ANALYTICS FOR MANUFACTURING</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To Understand the competitive advantage of big data analytics and its frameworks.

To Learn Data analysis methods and stream computing.

To gain knowledge on Hadoop related tools such as HBase, Cassandra, Pig, and Hive for big data analytics.

### Course Outcomes:

<b>CO1</b>	Enumerate the features, evolution and modern tools of Data Analytics.
<b>CO2</b>	Analyze the various methods of HADOOP framework.
<b>CO3</b>	Illustrate the statistical methods of Data analysis and Data analysis using R.
<b>CO4</b>	Analyze data by utilizing various data mining approaches
<b>CO5</b>	Understand the various NoSql alternative database models

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2				1							1			
<b>CO2</b>	1				3							2			2
<b>CO3</b>	1				2							2			2
<b>CO4</b>	1				3							2			2
<b>CO5</b>	2				3							1			2

### Course Topics

#### UNIT I: INTRODUCTION TO BIG DATA

Big Data – Definition, Characteristic Features – Big Data Applications - Big Data vs Traditional Data - Risks of Big Data - Structure of Big Data - Challenges of Conventional Systems - Web Data – Evolution of Analytic Scalability - Evolution of Analytic Processes, Tools and methods - Analysis vs Reporting - Modern Data Analytic Tools.

## **UNIT II: SYSTEM ORGANIZATION**

Distributed File Systems - Large-Scale File System Organization – HDFS concepts - MapReduce Execution, Algorithms using MapReduce, Matrix-Vector Multiplication – Hadoop YARN.

## **UNIT III: DATA ANALYSIS**

Statistical Methods: Regression modelling, Multivariate Analysis - Classification: SVM & Kernel Methods - Rule Mining - Cluster Analysis, Types of Data in Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density Based Methods, Grid Based Methods, Model Based Clustering Methods, Clustering High Dimensional Data - Predictive Analytics – Data analysis using R.

## **UNIT IV: MINING DATA STREAMS**

Streams: Concepts – Stream Data Model and Architecture - Sampling data in a stream - Mining Data Streams and Mining Time-series data - Real Time Analytics Platform (RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.

## **UNIT V: BIG DATA FRAMEWORKS**

Introduction to NoSQL – Aggregate Data Models – H base: Data Model and Implementations – H base Clients – Examples – Cassandra: Data Model – Examples – Cassandra Clients – Hadoop Integration. Pig – Grunt – Pig Data Model – Pig Latin – developing and testing Pig Latin scripts. Hive – Data Types and File Formats – HiveQL Data Definition – HiveQL Data Manipulation – HiveQL Queries.

### **Practical:**

1. Downloading and installing Hadoop; Understanding different Hadoop modes. Startup scripts, Configuration files.
2. Hadoop Implementation of file management tasks, such as Adding files and directories, Retrieving files and Deleting files
3. Implement of Matrix Multiplication with Hadoop Map Reduce
4. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
5. Implementation of K-means clustering using Map Reduce
6. Installation of Hive along with practice examples.
7. Installation of HBase, Installing thrift along with Practice examples
8. Patrice importing and exporting data from various databases .

<b>MEC21XXX</b> <b>SMART MANUFACTURING AND INDUSTRY 4.0</b>	L	T	P	X	C
	3	0	2	0	4
Prerequisite: Nil	Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To provide students with the concepts of planning manufacturing systems, computer integrated manufacturing and enterprise integration, group Technology and knowledge based systems.

### Course Outcomes:

<b>CO1</b>	Assess the performance of manufacturing systems and CIM systems.
<b>CO2</b>	Develop a systematic approach for design and implementation of manufacturing systems.
<b>CO3</b>	Interpret new procedures to improve the productivity of existing manufacturing systems.
<b>CO4</b>	Enumerate the model and algorithm of Group Technology.
<b>CO5</b>	Analyze the impact of knowledge based group technology systems in automated manufacturing system.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	3		2	2		1					2	3	1	2
<b>CO2</b>	1	3		3	2							1	2	2	2
<b>CO3</b>	1	1		2			1					3	3	1	
<b>CO4</b>	1	1		3	2		1					3	3	2	
<b>CO5</b>	1	2		2								2	3	2	

## **Course Topics**

### **UNIT I: COMPUTER INTEGRATED MANUFACTURING**

Computer integrated manufacturing systems – structure and functional areas of CIM system - AD, CAPP, CAM, CAQC, ASRS and advantages of CIM Manufacturing communication systems – MAP/TOP OSI model, data redundancy, top-down and bottom-up approach, volume of information. Intelligent manufacturing – system components, system architecture and data flow, system operation

### **UNIT II: ARTIFICIAL INTELLIGENCE**

Components of knowledge-based systems – basic components of knowledge-based systems, knowledge representation, comparison of knowledge representation schemes, inference engine, knowledge acquisition Machine learning – concept of artificial intelligence, conceptual learning, artificial neural networks -biological neuron, artificial neuron, types of neural networks, applications in manufacturing

### **UNIT III: PROCESS PLANNING**

Automated process planning – variant approach, generative approach, expert systems for process planning, feature recognition, phases of process planning Knowledge Based System for Equipment Selection (KBSES) – Manufacturing system design, equipment selection problem, modelling the manufacturing equipment selection problem, problem solving approach in KBSES, structure of the KBSES

### **UNIT IV: GROUP TECHNOLOGY**

Group technology: models and algorithms – visual method, coding method, cluster analysis method, matrix formation – similarity coefficient method, sorting-based algorithms, bond energy algorithm, cost-based method, cluster identification method, extended ci method.

### **UNIT V: KNOWLEDGE BASE SYSTEM**

Knowledge based group technology - group technology in automated manufacturing system, structure of knowledge-based system for group technology (KBSGT) – data base, knowledge base, clustering algorithm

### **List of Practical Component**

1. Study of Smart factory architecture
2. Smart factory modelling in terms of resources, organization, information, and function
3. Resource scheduling within a smart factory
4. Supply chain scheduling
5. Energy-efficient machining decision-making for Industry 4.0
6. Ontology-based approach to process planning
7. Manufacturing resource representation for a smart factory

8. Implementation of Smart product configuration system.

<b>MEC21XXX</b> <b>PRODUCTION DRAWING AND MANUFACTURING ANALYSIS</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To understand the basic concept of production drawing and analysis of Manufacturing systems in industries.

### Course Outcomes:

<b>CO1</b>	Analyze the principle and working model of manufacturing systems.
<b>CO2</b>	Interpretation of Line balancing algorithm and production flow analysis.
<b>CO3</b>	Analysis of FMS and Group Technology systems in manufacturing.
<b>CO4</b>	Enumerate the principle of material handling system and AGV in manufacturing industries.
<b>CO5</b>	Understand the basic concept of Storage and Retrieval systems.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	1		2							1	3	3	2	
<b>CO2</b>	2	1		2								2	3		
<b>CO3</b>	3	2		3							2	2	3	2	
<b>CO4</b>	2	1		2							1	3	3		
<b>CO5</b>	3	1		2							1	2	3		

### Course Topics

#### UNIT I: MANUFACTURING SYSTEMS MODEL

Introduction to manufacturing systems models, types and principles of manufacturing systems, manufacturing models, types and uses physical models, mathematical models, model uses, model building, numerical problems/simulation exercises.

## **UNIT II: ASSEMBLY LINES**

Introduction to assembly lines, line balancing algorithms, COMSOL random sequence generation, ranked positional weight, heuristics, optimal solutions, practical issues, mixed models, sequencing unpaced lines, shop scheduling with many products, order release, flow shop sequencing, single and two machine flow shops, job shop scheduling, dispatching rules and schedule generation, numerical problems/simulation exercises

## **UNIT III: FLEXIBLE MANUFACTURING SYSTEM**

Introduction to FMS, components of FMS machines, movement system, work stations, system controller, planning and control hierarchy, system design, system set up, scheduling and control, flexible assembly system Group technology principles, coding schemes, assign machines to groups, production flow analysis, binary ordering algorithm, assigning parts to machines.

## **UNIT IV: MATERIAL HANDLING SYSTEMS**

Introduction, types and principles of material handling systems, equipment selection, conveyor analysis, closed loop conveyor, AGV systems, design and operation of AGVs vehicle, requirements, analysis, pallet sizing and loading, use of petri nets

## **UNIT V: STORAGE SYSTEMS**

Introduction to warehousing and storage and retrieval system, warehouse components, warehouse design, stacking pattern, location in warehouses, dedicated storage, open storage, class base storage, storing complementary items, order picking, forming pick list, pick sequencing.

### **List of Practical Component**

1. Product knowledge management tools, methods, and techniques for one-of-a-kind production
2. Enabling technology for rapid development of high value-added customised product
3. Manufacturing resource representation for a smart factory.
4. Simulation exercise on Job shop scheduling.
5. Develop an Automatic guided Vehicle for a pick and place application.
6. Enable quality management; create tests, item sampling, definitions and process of the quality management process.
7. Create a manual quality order with a specification.
8. Work with non-conformance issues like faulty items by defining several required specifications.

### **Text Book:**

<b>MEC21XXX APPLICATION OF AR AND VR IN MANUFACTURING</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

This course presents an introduction to virtual and augmented reality technologies, with an emphasis on designing and developing interactive virtual and augmented reality experiences.

### Course Outcomes:

<b>CO1</b>	Understand the basics of AR and VR in Manufacturing.
<b>CO2</b>	Enumerate the technology of VR and 3D data structures.
<b>CO3</b>	Interpret the Framework of AR in the industrial environment and AIBAS system.
<b>CO4</b>	Analyze the impact of AR in new user interfaces in the manufacturing industry.
<b>CO5</b>	Analyze the manufacturing and service applications of Augmented Reality.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	2		2	3						1	3	3	2	3
<b>CO2</b>	3	2		3	2						1	2	3	2	2
<b>CO3</b>	3	3		3	2						2	2	3	3	1
<b>CO4</b>	3	2		2	1						1	3	3	2	2
<b>CO5</b>	3	2		2	1						1	2	3	3	2

### Course Topics

#### UNIT-I: SOLID MODELING OF VR

Introduction of VR and AR applications in Manufacturing- Background of AR and VR Technologies- AR Technologies: Registry, Latency, Calibration, Human Factors- Research Issues- VR in manufacturing- AR in manufacturing- Solid Modelling in a Virtual Reality Environment- Structure of the Constraint-based Model- Polygon Model Representation- Constraint-based Manipulations-

## **UNIT-II: VIRTUAL ENVIRONMENTS**

VR Technology – Applications- Collaborative Virtual Reality- Data Transfer Between Virtual Environments- Data Controller in Collaborative Virtual Manufacturing- Object Data Structures in Virtual Reality Manufacturing - Architecture of Data-Traffic Controller- Data-Control Engine- Elements of Data Control Engine- A Supervisory Data-Traffic Controller-Decision Support System for Integrating Real-time Manufacturing- 3D Data Structures- Basic Manufacturing Operations

## **UNIT-III: AR ENVIRONMENTS**

AR Technology - Devices and Technology- AR Framework in Industrial Environments- Adaptive Intent based Augmentation System (AIBAS)- Communicative Intent in AR- Strategies for Visual Context- Inset Windows to Reduce Ambiguity- AIBAS System Implementation: Augment a Hidden Object, Augment a Unique Visible Object, Augment an Ambiguous Visible Object, Augment a Scene with Virtual Objects

## **UNIT-IV: AR NETWORKING**

Augmented Reality as a New User Interface: For Layout Planning of Manufacturing Systems- AR-based Manufacturing Planning System- Construction functions- Simulation of Planning Stages- Realization of the Prototype- Teleportal Augmented Reality System: Integrating Virtual Objects, Remote Collaborators, and Physical Reality for Distributed Networked Manufacturing

## **UNIT-V: AR SERVICE APPLICATIONS**

AR Technology - Manufacturing and Service Applications- Developing and Applying AR Technology in Design, Production, Service and Training- Mobile Service Applications for Machine Tools- Validation of the Dynamics of a Parts Feeding System - Vision-based Augmented Reality for Guiding Assembly- Performance Evaluation of Augmented Reality for Directed Assembly- The Intelligent Welding Gun: Augmented Reality for Experimental Vehicle Construction- Helmet for the Manual Welding Process

### **Practical:**

1. Installation of Unity and Visual Studio, setting up Unity for VR development, understanding documentation of the same.
2. Develop an innovative Augmented Reality Android App
3. Perform Augmented Reality and Real 3D object Tracking
4. Develop an Augmented Reality Video Playback.
5. Augmented Reality for animation
6. Augmented Reality Internet of Things
7. Develop a scene in Unity that includes: Model 3D objects and apply transformations on the 3 game objects.
8. Simulation of circulation of blood in heart.

**Text Book:**

<b>MEC21XXX</b> <b>CYBER PHYSICAL SYSTEM IN MANUFACTURING</b>	L	T	P	X	C
	3	0	2	0	4
Prerequisite: Nil	Course Category: Professional Elective Course type: T				

### Course Objectives:

This course deals with the advancements of cloud technology and functions of Cyber physical systems in the manufacturing domain.

### Course Outcomes:

<b>CO1</b>	Enumerate the latest advancements of cloud technologies.
<b>CO2</b>	Interpret the concept of Distributed Process Planning (DPP) and its architecture.
<b>CO3</b>	Analyze the functions of Adaptive Machining Using Function Blocks.
<b>CO4</b>	Implementation of Cyber Physical System (CPS) in robotic assembly.
<b>CO5</b>	Enumerate the design and life cycle analysis of Cyber Physical System.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	2		1	1							2	2	2	1
<b>CO2</b>	3	1		2	1							3	1	1	
<b>CO3</b>	2	2		1	2							2	2	1	1
<b>CO4</b>	3	2		1	1							2	2	2	
<b>CO5</b>	3	1		2	1							2	2	2	2

### Course Topics

#### UNIT I: CLOUD TECHNOLOGY

Latest Advancement in Cloud Technologies- Introduction to Cloud Computing- Historical Evolution and Background- Latest Advancement in Cloud Technologies- Introduction to Cloud Computing- Historical Evolution and Background- Latest Advancement in CPS and IoT Applications- Introduction- Key Enabling- Technologies in CPS and IoT- Wireless Sensor Network- Cloud Technologies- Big Data- Industry 4.0- RFID Technology- Applications of CPS and IoT- Challenges in Cybersecurity

## **UNIT II: PROCESS PLANNING**

Cloud-Based Monitoring, Planning and Control in CPS- Machine Availability Monitoring and Process Planning- Concept of Distributed Process Planning- Architecture Design of a Web-Based DPP- Functional Analysis of Web-DPP- Web-DPP Prototype Implementing- Cloud-Enabled Distributed Process Planning- Multi-tasking Machines and Mill-Turn Parts

## **UNIT III: ADAPTIVE MACHINING**

Adaptive Machining Using Function Blocks- Introduction- Function Block Concept- Function Block Types- Execution of Function Block- Internal Behaviour of Function Block- Enriched Machining Features- Adaptive Machining Feature Sequencing- Adaptive Setup Merging and Dispatching- Condition Monitoring for Predictive Maintenance- Fundamentals of Prognosis- Prognostic Methods- Physics-Based Models- AI-Based Data-Driven Models- Statistical Data-Driven Models- Model-Based Approach- Prognosis Applications

## **UNIT IV: ASSEMBLY SYSTEMS**

Sustainable Robotic Assembly in CPS Settings- Methodology and Implementation- Case Studies: Energy Map of Robot Workspace, Energy Measurement in Predefined Paths- Safety in Human-Robot Collaborative Assembly- Depth Sensor-Driven Active Collision Avoidance- A Remote Assembly Application- Cloud Robotics Towards a CPS Assembly System- Gesture Recognition- Human Motion Prediction

## **UNIT V: SCHEDULING**

CPS Systems Design and Lifecycle Analysis- Architecture Design of Cloud CPS in Manufacturing- Cloud Manufacturing Framework- Manufacturing Capability and Manufacturing Resource- Interoperability and Other Issues- Product Tracking and WEEE Management- Big Data Analytics for Scheduling and Machining- Big Data Analytics for Shop-Floor Scheduling- Big Data Analytics based Optimisation for Machining

### **Practical:**

1. Develop a model using a Cyber Physical 3D printing system.
2. Experiment on Real-time manufacturing data acquisition.
3. Interpret Data communication, integration and management using CPS System.
4. Machine tool information modelling using Cyber Physical System.
5. Augmented Reality (AR)-based visualization of machine tool status and machining processes.
6. Semantic Machine-to-Machine (M2M) communication between field-level manufacturing devices (e.g. machine tools, AGVs, robots)

### **Text Book:**

1. Lihui Wang, Xi Vincent Wang - Cloud-Based Cyber-Physical Systems in Manufacturing- Springer International Publishing (2018)

PROGRAM ELECTIVE  
COURSE  
(Mechatronics & Automation)

<b>MEC21XXX PLANT SIMULATION</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with Practical				

### Course Objectives:

To understand the application of computers in various aspects of Manufacturing viz., Design, Proper planning, Manufacturing cost, Layout & Material Handling system.

### Course Outcomes:

<b>CO1</b>	Outline the plant simulation strategies and their importance
<b>CO2</b>	Creating the model of the objects by using the drafting tools
<b>CO3</b>	Illustrate the material movement process and the units utilized.
<b>CO4</b>	Illustrate the use of analysis tools use for plant simulation process
<b>CO5</b>	Categorize the data handling and processing methods

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2		1		1						2		2	1	
<b>CO2</b>	2		1		2						2		2	1	
<b>CO3</b>	2		3		3						2		2	2	1
<b>CO4</b>	2		1		3						2		2	3	3
<b>CO5</b>	2		2		3						3	2	2	2	2

### Course Topics

#### UNIT I: BASICS OF PLANT SIMULATION

Basic Plant Simulation interface- Object-oriented modeling strategies - Basics of material flow objects - Hierarchy, icons, and inheritance

#### UNIT II: MODELLING OF OBJECTS

Modeling buffers, assembly lines and roads, Kanban, and failures, Resource objects (i.e. workers and shift calendars), Resource objects (i.e. workers, shift calendars, foot paths, etc.)

### **UNIT III: MATERIAL MOVEMENT AND UNITS**

Basic conveying systems (length-oriented objects), other objects (i.e. Information objects, User Interface objects, mobile units).

### **UNIT IV: ANALYSIS TOOLS**

Sankey, bottleneck analyzer, and experiment manager basics, Customizing object logic (Method creation), Methods for data collection and evaluation

### **UNIT: DATA HANDLING**

Methods for interfaces (Excel, DDE, basics of other interfaces), Data acquisition from external files and systems

<b>MEC21XXX</b> <b>ROBOTICS : FUNDAMENTAL CONCEPTS AND ANALYSIS</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To impart the knowledge about the basics of robotics and their kinetics

### Course Outcomes:

<b>CO1</b>	Understand the basics of robotics and their geometry
<b>CO2</b>	Enumerate the concepts of homogeneous transformation
<b>CO3</b>	Ability to apply the forward kinematics principles
<b>CO4</b>	Understand the inverse kinematics processes
<b>CO5</b>	Interpret the robotics motion in angular aspects

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	3		1	1							2	2	2	1
<b>CO2</b>	3	1		3	1							3	1	1	
<b>CO3</b>	2	2		1	2							2	2	1	1
<b>CO4</b>	3	2		1	1							2	2	2	
<b>CO5</b>	3	1		2	1							2	2	2	2

### Course Topics

#### UNIT I: INTRODUCTION

Classification of Robots based on Geometry, Workspace, Actuation, Control and Application - Advantages and Disadvantages of Robots - Robot Components: Link, Joint, Manipulator, Wrist, End-effector : Gripper –Types, Actuator and Sensor - Configuration space – Joint Space – Workspace, Robot Specifications: Number of Axes:Internal and External (7-axis robot) - Capacity and Speed, Reach and Stroke, Tool Orientation, Repeatability, Precision and Accuracy, Operating Environment

## **UNIT II: HOMOGENEOUS TRANSFORMATIONS**

Degrees of Freedom – Matrix Representation: Representation of a point and vector in space, Global and Local Coordinate axes - Homogeneous Transformation Matrices – Transformations: Representation of pure translation, Representation of pure Rotation - Representation of Combined Transformations - Inverse of Transformation Matrices - Euler Angles – Roll, Pitch, Yaw angles - Quaternions–Spinors and Rotations

## **UNIT III: FORWARD KINEMATICS**

Denavit-Hartenberg Notation - Transformation between two Adjacent Coordinate Frames Forward Kinematics of Two, Three, Four, Five and Six axis Robots

## **UNIT IV: INVERSE KINEMATICS**

Decoupling Technique - Inverse Transformation Technique - Inverse position: Geometric Approach – Inverse Orientation - Inverse Kinematics of Two, Three, Four, Five and Six axis Robots.

## **UNIT V: VELOCITY KINEMATICS**

Angular Velocity – Linear Velocity - Jacobian representation of Linear and Angular Velocity Calculation of Jacobian for Two, Three and Four axis Robots - Inverse Jacobian - Singularities: Wrist and Arm Singularities - Manipulability - Induced joint torques and forces.

### **List of Practical Component**

1. Programming on VAL Language
2. Programming on VAL-II Language
3. Programming on RAPID Language
4. Programming on AML Language
5. Programming the robot for pick and place operation using any robot
6. Robot Programming for Colour identification/shape identification/path tracking
7. Industrial visit and its report on industrial applications of robots

### **Text Book:**

<b>MEC21XXX</b> <b>AUTOMATION SYSTEM DESIGN</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To provide the concepts of process automation and system integration principles

### Course Outcomes:

<b>CO1</b>	Describe the model of automation system in various industries
<b>CO2</b>	Able to select the motion components for the given applications
<b>CO3</b>	Understand the terminologies and the process of automated assembly
<b>CO4</b>	Design of parts for high speed assembly applications
<b>CO5</b>	Enumerate the economics of automation system design

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	2		1	1							2	2	2	1
<b>CO2</b>	1	1		2	1							2	1	1	
<b>CO3</b>	1	2		1	2							2	1	1	1
<b>CO4</b>	3	1		2	1							1	2	2	
<b>CO5</b>	3	1		2	1							2	1	2	2

### Course Topics

#### UNIT I: INTRODUCTION TO PROCESS AUTOMATION

Process Automation – paper industry, packaging industry, food processing industry, Integrated design issues in automation systems, the Mechatronics design process- benefits, modeling of electromechanical systems, bond graph technique, Automation migration strategy - building blocks of automation system

#### UNIT II: SELECTION OF MOTION COMPONENTS

Selection of motor for automation system, Calculation of inertia force for motor, LM Guide ways, Ball screws, Selection, from the manufacturer's catalogue based on the applications.

### **UNIT III: TRANSFER LINES AND AUTOMATED ASSEMBLY**

General terminology-takt time, setup time and cycle time, Automated flow lines with storage buffers. Automated assembly-design for automated assembly, types of automated assembly systems, part feeding devices, analysis of multi-station assembly machines - modular fixturing - Flow line balancing

### **UNIT IV: DESIGN FOR HIGH SPEED AUTOMATIC ASSEMBLY**

Introduction, Design of parts for high speed feeding and orienting, high speed automatic insertion, Analysis of an assembly, General rules for product design for automation – Application of high speed automatic assembly.

### **UNIT V: SYSTEM INTEGRATION**

Issues and systematic approaches, design and simulation using CIROS software, economics of automation systems design and implementation

#### **Text Book:**

1. Mikell P Groove, "Automation Production Systems and Computer Integrated Manufacturing", Pearson education, New Delhi, 2016.
2. Geoffery Boothroyd, "Assembly Automation and Product Design", CRC Press, USA, 2016

#### **Reference:**

<b>MEC21XXX</b> <b>AUTOMATIC CONTROL SYSTEM</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To facilitate the students to learn and adopt the concepts of automatic control system

### Course Outcomes:

<b>CO1</b>	Outline the components of automatic control system
<b>CO2</b>	Illustrate the procedure of time domain analysis
<b>CO3</b>	Able to estimate the second order system and also correlate time and frequency domain
<b>CO4</b>	Enumerate the concepts of state variables of and state models
<b>CO5</b>	Understand the concepts of stability and root locus

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	2		2	1							2	2	2	1
<b>CO2</b>	2	2		3	2							2	2	1	
<b>CO3</b>	1	2		1	2							2	1	2	1
<b>CO4</b>	3	1		2	1							1	2	2	2
<b>CO5</b>	3	1		2	1							2	1	2	2

### Course Topics

#### UNIT I: INTRODUCTION

Components of Automatic control systems- Open loop and closed loop systems - Examples - Transfer function - Modeling of physical systems - Mechanical Systems - Translational and Rotational systems - Hydraulic systems and Electrical Systems - Transfer function of DC servomotor - AC servomotor - Block diagram - reduction techniques - Signal flow graph - Mason's gain formula.

#### UNIT II: TIME DOMAIN ANALYSIS

Continuous time signals - Standard Test signals - Classification of continuous time systems  
Linear- Nonlinear - Time variant - Time invariant - Static - Dynamic - Time response of second order system - Time domain specifications - Types of systems - Steady state error constants - Generalized error series - Introduction to P, PI and PID modes of feedback control. - Introduction to lead, lag and lead-lag compensators

### **UNIT III: FREQUENCY DOMAIN ANALYSIS**

Frequency domain specifications - Estimation for second order systems- Correlation between time and frequency domain specifications for second order systems - . Bode plot – Determination of Transfer Function from Bode plot - All pass minimum phase and non-minimum phase systems - Polar plot - Determination of gain and phase Margins from the plots.

### **UNIT IV: STATE SPACE ANALYSIS**

Limitations of conventional control theory - Concepts of state, state variables and state model - state model for linear time invariant systems - Introduction to state space representation using physical - Phase and canonical variables - State equations - Transfer function from the State model - Solutions of the state equations -State Transition Matrix - Concepts of controllability and observability

### **UNIT V: SYSTEM STABILITY**

Concept of stability - stability & location of the poles in S-plane - Characteristic equation - Routh-Hurwitz stability criterion - Root Locus concepts- Construction of root locus – Root contours - Absolute and Relative stability - Nyquist stability - Nyquist stability criterion - Assessment of relative stability - Gain and Phase Margin.

<b>MEC21XXX</b> <b>DYNAMICS AND CONTROL OF MANIPULATORS</b>	L	T	P	X	C
	3	0	2	0	4
Prerequisite: Nil	Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To make the students understand the function of dynamics and control of manipulators.

### Course Outcomes:

<b>CO1</b>	Enumerate the acceleration and motion dynamics in various aspects
<b>CO2</b>	Outline the various equations used in robot dynamics
<b>CO3</b>	Understand the principles of various types of path planning
<b>CO4</b>	Develop the time optimal control for robots
<b>CO5</b>	Outline the control techniques used in robot design

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	2		2	1							2	2	2	1
<b>CO2</b>	2	2		1	2							3	2	1	
<b>CO3</b>	1	2		1	2							2	3	1	
<b>CO4</b>	2	2		2	1							1	2		2
<b>CO5</b>	2	1		2	1							2	1	2	2

### Course Topics

#### UNIT I: ACCELERATION AND MOTION DYNAMICS

Angular Acceleration Vector and Matrix - Rigid Body Acceleration – Forward Acceleration Kinematics – Inverse Acceleration Kinematics - Force and Moment – Rigid Body Translational and Rotational Kinetics - Mass Moment of Inertia Matrix - Lagrange's form of Newton Equations - Lagrangian Mechanics

#### UNIT II: ROBOT DYNAMICS

Rigid-link Newton Euler Dynamics - Robot Lagrange Dynamics - Lagrange Equations and Link

Transformation Matrices.

### **UNIT III: PATH PLANNING**

Cubic Path – Polynomial path - Manipulator motion by Joint path - Cartesian path – Rotational Path - Manipulator motion by end-effector path

### **UNIT IV: TIME OPTIMAL CONTROL**

Minimum time and bang-bang control - Floating Time Method - Time-optimal Control for Robots

### **UNIT V: CONTROL TECHNIQUES**

Open and Closed loop control - Computed Torque Control - Linear Control Technique - Sensing and Control

#### **Text Book:**

<b>MEC21XXX</b> <b>AUTONOMOUS ROBOTS</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Course type:				

### Course Objectives:

To present various aspects of design, fabrication, motion planning, and control of intelligent mobile robotic systems.

### Course Outcomes:

<b>CO1</b>	Discuss the various types of robot locomotion.
<b>CO2</b>	Demonstrate the kinetic model of a mobile robot and its dynamic simulation.
<b>CO3</b>	Apply the various types of sensors to identify the robot perception.
<b>CO4</b>	Identify the localization of robotic systems.
<b>CO5</b>	Use the concepts of planning and navigation of mobile robots.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	3		2	2								2	1	1
<b>CO2</b>	2		3	2						1			2		
<b>CO3</b>	3	2			1								1		
<b>CO4</b>	2		1	3										1	1
<b>CO5</b>	2	2	1	1			2			1			1		

### Course Topics

#### UNIT 1: ROBOT LOCOMOTION

Types of locomotion, hopping robots, legged robots, wheeled robots, stability, maneuverability, controllability.

#### UNIT 2: MOBILE ROBOT KINEMATICS AND DYNAMICS

Forward and inverse kinematics, holonomic and nonholonomic constraints, kinematic models of simple car and legged robots, dynamics simulation of mobile robots.

#### UNIT 3: PERCEPTION

Proprioceptive/Exteroceptive and passive/active sensors, performance measures of sensors, sensors for mobile robots like global positioning system (GPS), Doppler effect-based sensors, vision based sensors, uncertainty in sensing, filtering.

#### **UNIT 4: LOCALIZATION**

Odometric position estimation, belief representation, probabilistic mapping, Markov localization, Bayesian localization, Kalman localization, positioning beacon systems.

#### **UNIT 5: INTRODUCTION TO PLANNING AND NAVIGATION**

Path planning algorithms based on A-star, Dijkstra, Voronoi diagrams, probabilistic roadmaps (PRM), rapidly exploring random trees (RRT), Markov Decision Processes (MDP), stochastic dynamic programming (SDP).

#### **Practical:**

1. Programming in C or Matlab to implement fuzzy logic applications for autonomous robot systems.
2. Programming in C/Matlab to implement simulated annealing/genetic algorithm for solving inverse kinematic problems
3. Programming in C/Matlab to solve traveling salesman problems using ant colony optimization algorithm
4. Write a program using Visual Prolog to create an expert system
5. Write a program for obstacle avoidance in mobile robots using any one algorithm
6. Implement A\* algorithm to Solve 8-puzzle problems using. Assume any initial configuration and define goal configuration clearly
7. Define the operators for controlling domestic robot; use these operators to plan an activity to be executed by the robot. For example, transferring two/three objects one over the other from one place to another. Use Means-Ends analysis with all the steps revealed.
8. Solving real time planning and scheduling problems using software like Witness/Pro-model

<b>MEC21XXX</b> <b>INTELLIGENT MEDICAL ROBOTS</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Program Elective Course type: Theory with practical				

### Course Objectives:

To Provide knowledge on the application of robotics in the field of health care.

### Course Outcomes:

<b>CO1</b>	Describe the types of medical robots and the concepts of navigation and motion replication.
<b>CO2</b>	Discuss about the sensors used for localization and tracking
<b>CO3</b>	Summarize the applications of surgical robotics
<b>CO4</b>	Outline the concepts in Rehabilitation of limbs and brain machine interface
<b>CO5</b>	Classify the types of assistive robots.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	2	1	2	2								3	1	1
<b>CO2</b>	2		2	3						1			2	1	
<b>CO3</b>	3	1			1								2		
<b>CO4</b>	2		1	3						1				1	1
<b>CO5</b>	2	2		3			2		1			1	1		

### Course Topics

#### UNIT 1 INTRODUCTION

Types of medical robots - Navigation - Motion Replication - Imaging - Rehabilitation and Prosthetics - State of art of robotics in the field of healthcare.

#### UNIT 2 LOCALIZATION AND TRACKING

Position sensors requirements - Tracking - Mechanical linkages - Optical - Sound-based - Electromagnetic - Impedance-based - In-bore MRI tracking - Video matching - Fiber optic tracking systems - Hybrid systems.

### **UNIT 3 CONTROL MODES**

Radiosurgery - Orthopedic Surgery - Urologic Surgery and Robotic Imaging - Cardiac Surgery – Neurosurgery – case studies.

### **UNIT 4 REHABILITATION**

Rehabilitation for Limbs - Brain-Machine Interfaces - Steerable Needles – case studies.

### **UNIT 5 ROBOTS IN MEDICAL CARE**

Assistive robots –types of assistive robots – case studies. Characterization of gestures to the design of robots- Design methodologies- Technological choices - Security.

### **Practical**

1. Introduction to Laboratory Equipments
2. Exoskeletons, Ultrasound Imaging Modality and Electromagnetic Tracking System
3. Simulation Study on Robot Dynamics
4. Simulation Study on Robot Kinematics and Control
5. Position Control of a Hand Exoskeleton using Subject's Intention
6. Force Control of a Hand Exoskeleton in Real-Time LabView Platform
7. Needle Maneuverability in Tissue Phantom through Image Guidance
8. Human Hand Biomechanics Study

### **Text Book:**

1. Mark W. Spong, Seth Hutchinson, and M. Vidyasagar, “Robot Modeling and Control”, Wiley Publishers, 2016.

UNIVERSITY ELECTIVE  
COURSES

<b>MEC21XXX</b> <b>BIO AND CHEMICAL PROCESS SAFETY</b>	L	T	P	X	C
	3	0	0	0	3
Prerequisite: Nil	Course Category: University Elective Course type: Theory				

### Course Objectives:

To provide an overview of the Safety process followed in chemical and Bio Industry processes.

### Course Outcomes:

<b>CO1</b>	Understand the importance of Safety Programs.
<b>CO2</b>	Implement safety procedures in a practical context.
<b>CO3</b>	Interpret and apply the professional obligations related to the discipline of safety and risk management.
<b>CO4</b>	Ability to apply the safety audit concepts and its models.
<b>CO5</b>	Understand the hazardous operation effects and recommendations.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	1					2	3					1	2		
<b>CO2</b>	2	2				3	1					3	3	3	
<b>CO3</b>	1	2				3		2				3	2	3	2
<b>CO4</b>	2	3				3	2					3	3	2	2
<b>CO5</b>		3				3	2					1	3		

### Course Topics

#### UNIT I: INTRODUCTION

Need for safety in industries; Safety Programmes – components and realization; Potential hazards– extreme operating conditions, toxic chemicals; safe handling

#### UNIT II: QUALITY CHECKS

Implementation of safety procedures – periodic inspection and replacement; Accidents – identification and prevention; promotion of industrial safety

### **UNIT III: RISK ANALYSIS**

Overall risk analysis--emergency planning-on site & off site emergency planning, risk management ISO 14000, EMS models case studies. Quantitative risk assessment – rapid and comprehensive risk analysis; Risk due to Radiation, explosion due to over pressure, jet fire-fire ball.

### **UNIT IV: SAFETY AUDITS**

Hazard identification safety audits, checklist, what if analysis, vulnerability models event tree analysis fault tree analysis, Hazan past accident analysis Fix borough-Mexico-Madras- Vizag Bopal analysis.

### **UNIT V: HAZARDOUS OPERATIONS**

Hazop-guide words, parameters, derivation-causes-consequences-recommendation-coarse Hazop study-case studies-pumping system-reactor-mass transfer system.

#### **Text Book:**

2. Center for Chemical Process Safety, "Guidelines for Auditing Process Safety Management Systems" , 1992.

<b>MEC21XXX</b> <b>ROBOTICS : FUNDAMENTAL CONCEPTS</b>	L	T	P	X	C
	3	0	2	0	4
Prerequisite: Nil	Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To impart the knowledge about the basics of robotics and their kinetics

### Course Outcomes:

<b>CO1</b>	Understand the basics of robotics and their geometry
<b>CO2</b>	Enumerate the concepts of homogeneous transformation
<b>CO3</b>	Ability to apply the forward kinematics principles
<b>CO4</b>	Understand the inverse kinematics processes
<b>CO5</b>	Interpret the robotics motion in angular aspects

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	3		1	1							2	2	2	1
<b>CO2</b>	3	1		3	1							3	1	1	
<b>CO3</b>	2	2		1	2							2	2	1	1
<b>CO4</b>	3	2		1	1							2	2	2	
<b>CO5</b>	3	1		2	1							2	2	2	2

### Course Topics

#### UNIT I: INTRODUCTION

Classification of Robots based on Geometry, Workspace, Actuation, Control and Application - Advantages and Disadvantages of Robots - Robot Components: Link, Joint, Manipulator, Wrist, End-effector : Gripper –Types, Actuator and Sensor - Configuration space – Joint Space – Workspace, Robot Specifications: Number of Axes:Internal and External (7-axis robot) - Capacity and Speed, Reach and Stroke, Tool Orientation, Repeatability, Precision and Accuracy, Operating Environment

## **UNIT II: HOMOGENEOUS TRANSFORMATIONS**

Degrees of Freedom – Matrix Representation: Representation of a point and vector in space, Global and Local Coordinate axes - Homogeneous Transformation Matrices – Transformations: Representation of pure translation, Representation of pure Rotation - Representation of Combined Transformations - Inverse of Transformation Matrices - Euler Angles – Roll, Pitch, Yaw angles - Quaternions–Spinors and Rotations

## **UNIT III: FORWARD KINEMATICS**

Denavit-Hartenberg Notation - Transformation between two Adjacent Coordinate Frames Forward Kinematics of Two, Three, Four, Five and Six axis Robots

## **UNIT IV: INVERSE KINEMATICS**

Decoupling Technique - Inverse Transformation Technique - Inverse position: Geometric Approach – Inverse Orientation - Inverse Kinematics of Two, Three, Four, Five and Six axis Robots.

## **UNIT V: VELOCITY KINEMATICS**

Angular Velocity – Linear Velocity - Jacobian representation of Linear and Angular Velocity Calculation of Jacobian for Two, Three and Four axis Robots - Inverse Jacobian - Singularities: Wrist and Arm Singularities - Manipulability - Induced joint torques and forces.

### **Practical:**

Programming on VAL Language

Programming on VAL-II Language

Programming on RAPID Language

Programming on AML Language

Programming the robot for pick and place operation using any robot

Robot Programming for Colour identification/shape identification/path tracking

Industrial visit and its report on industrial applications of robots

<b>MEC21XXX</b> <b>AUTOMATION SYSTEM DESIGN</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To provide the concepts of process automation and system integration principles

### Course Outcomes:

<b>CO1</b>	Describe the model of automation system in various industries
<b>CO2</b>	Able to select the motion components for the given applications
<b>CO3</b>	Understand the terminologies and the process of automated assembly
<b>CO4</b>	Design of parts for high speed assembly applications
<b>CO5</b>	Enumerate the economics of automation system design

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	2		1	1							2	2	2	1
<b>CO2</b>	1	1		2	1							2	1	1	
<b>CO3</b>	1	2		1	2							2	1	1	1
<b>CO4</b>	3	1		2	1							1	2	2	
<b>CO5</b>	3	1		2	1							2	1	2	2

### Course Topics

#### UNIT I: INTRODUCTION TO PROCESS AUTOMATION

Process Automation – paper industry, packaging industry, food processing industry, Integrated design issues in automation systems, the Mechatronics design process- benefits, modeling of electromechanical systems, bond graph technique, Automation migration strategy - building blocks of automation system

#### UNIT II: SELECTION OF MOTION COMPONENTS

Selection of motor for automation system, Calculation of inertia force for motor, LM Guide ways, Ball screws, Selection, from the manufacturer's catalogue based on the applications.

### **UNIT III: TRANSFER LINES AND AUTOMATED ASSEMBLY**

General terminology-takt time, setup time and cycle time, Automated flow lines with storage buffers. Automated assembly-design for automated assembly, types of automated assembly systems, part feeding devices, analysis of multi-station assembly machines - modular fixturing - Flow line balancing

### **UNIT IV: DESIGN FOR HIGH SPEED AUTOMATIC ASSEMBLY**

Introduction, Design of parts for high speed feeding and orienting, high speed automatic insertion, Analysis of an assembly, General rules for product design for automation – Application of high speed automatic assembly.

### **UNIT V: SYSTEM INTEGRATION**

Issues and systematic approaches, design and simulation using CIROS software, economics of automation systems design and implementation

#### **Text Book:**

<b>MEC21XXX</b> <b>ADDITIVE (3D) MANUFACTURING</b>		L	T	P	X	C
		3	0	0	0	3
Prerequisite: Nil		Course Category: University Elective Course type: Theory				

**Course Objectives:**

The aim of this course is to make the students to understand the basic concepts and nuances of 3D Printing Technology

**Course Outcomes:**

<b>CO1</b>	Outline the concepts behind the design consideration required for 3D printing.
<b>CO2</b>	Recognize the basic Knowledge in selecting the 3D Printing materials and their applications
<b>CO3</b>	Summarize the various types of Inkjet technology and its working principles.
<b>CO4</b>	Contrast the Laser technology and its impact on 3D printing
<b>CO5</b>	Interpret the appropriate method for designing and modeling Industrial applications

**Mapping of Course Outcomes:**

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	2	2	1	2							2	2	2	2
<b>CO2</b>	2	1										2	2	2	
<b>CO3</b>	2	1	2		2			1				2	2	2	1
<b>CO4</b>	2	2	2		2			1				2	2	2	1
<b>CO5</b>	2	2										2	2	2	

## **Course Topics**

### **UNIT I: INTRODUCTION**

Introduction; Design considerations – Material, Size, Resolution, Process; Modeling and viewing - 3D; Scanning; Model preparation – Digital; Slicing; Software; File formats

### **UNIT II: PRINCIPLE**

Processes – Extrusion, Wire, Granular, Lamination, Photo polymerisation; Materials - Paper, Plastics, Metals, Ceramics, Glass, Wood, Fiber, Sand, Biological Tissues, Hydrogels, Graphene; Material Selection - Processes, applications, limitations

### **UNIT III: INKJET TECHNOLOGY**

Printer - Working Principle, Positioning System, Print head, Print bed, Frames, Motion control; Print head Considerations – Continuous Inkjet, Thermal Inkjet, Piezoelectric Drop-On-Demand; Material Formulation for jetting; Liquid based fabrication – Continuous jet, Multi jet; Powder based fabrication – Color jet

### **UNIT IV: LASER TECHNOLOGY**

Light Sources – Types, Characteristics; Optics – Deflection, Modulation; Material feeding and flow – Liquid, powder; Printing machines – Types, Working Principle, Build Platform, Print bed Movement, Support structures

### **UNIT V: INDUSTRIAL APPLICATIONS**

Product Models, manufacturing – Printed electronics, Biopolymers, Packaging, Healthcare, Food, Medical, Biotechnology, Displays; Open source; Future trends

### **Text Book:**

<b>MEC21XXX</b> <b>FUNDAMENTALS OF MICRO AND NANO</b> <b>FABRICATION</b>	L	T	P	X	C
	3	0	0	0	3
Prerequisite: Nil	Course Category: University Elective Course type: Theory				

### Course Objectives:

To gain the fundamental knowledge of Micro and Nano Fabrication Process.

### Course Outcomes:

<b>CO1</b>	Understand the fundamentals of basic mechanical micro machining processes.
<b>CO2</b>	Describe the processes involved in the beam energy based micro machining.
<b>CO3</b>	Elucidate the concepts involved in the abrasive flow finishing process.
<b>CO4</b>	Outline the Micro and Nano Structure Surface development processes.
<b>CO5</b>	Recognize the classification and effects of nanostructures.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	1	2	2								2	3	1	
<b>CO2</b>	3	1	2	2								2	2	1	2
<b>CO3</b>	3		1	2								3	3	2	
<b>CO4</b>	3	1	3	2								3	3	2	2
<b>CO5</b>	3		1	2								3	3	3	

### Course Topics

#### UNIT I: PHYSICAL PROCESSES

Mechanical Micro machining – Ultrasonic Micro Machining – Abrasive Jet Micromachining – Water Jet Micro Machining – Abrasive Water Jet Micro Machining – Micro turning – Chemical and ElectroChemical Micro Machining – Electric discharge micromachining

#### UNIT II: BEAM BASED PROCESSES

Beam Energy based micromachining – Electron Beam Micro Machining – Laser Beam Micro Machining – Electric Discharge Micromachining – Ion Beam Micro Machining – Plasma Beam

MicroMachining – Hybrid Micro machining – Electro Discharge Grinding – Electrochemical spark micromachining – Electrolytic in process Dressing.

### **UNIT III: ABRASIVE AND MAGNETIC BASED PROCESSES**

Abrasive Flow finishing – Magnetic Abrasive Finishing – Magneto rheological finishing – MagnetoRheological abrasive flow finishing - Magnetic Float polishing – Elastic Emission Machining – chemo mechanical Polishing.

### **UNIT IV: OTHER MICRO FABRICATION PROCESSES**

Micro extrusion – Micro and Nano structured surface development by Nano plastic forming and Roller Imprinting – Micro bending with LASER – LASER micro welding – Electron beam for micro welding.

### **UNIT V: MICROSTRUCTURAL PROPERTIES**

Classification of nanostructures – Effects of nanoscale dimensions on various properties –Effect of nanoscale dimensions on mechanical properties - vibration, bending, fracture Nanoparticles, Sol-Gel Synthesis, Inert Gas Condensation, High energy Ball Milling, Plasma Synthesis, Electro deposition and other techniques. Synthesis of Carbon nano tubes – Solid carbon source-based production techniques – Gaseous carbon source-based production techniques –Top down and bottom-up processes.

<b>MEC21XXX SMART MANUFACTURING</b>		L	T	P	X	C
		3	0	0	0	3
Prerequisite: Nil		Course Category: Professional Elective Course type: Theory with practical				

### Course Objectives:

To provide students with the concepts of planning manufacturing systems, computer integrated manufacturing and enterprise integration, group Technology and knowledge based systems.

### Course Outcomes:

<b>CO1</b>	Assess the performance of manufacturing systems and CIM systems.
<b>CO2</b>	Develop a systematic approach for design and implementation of manufacturing systems.
<b>CO3</b>	Interpret new procedures to improve the productivity of existing manufacturing systems.
<b>CO4</b>	Enumerate the model and algorithm of Group Technology.
<b>CO5</b>	Analyze the impact of knowledge based group technology systems in automated manufacturing system.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	3		2	2		1					2	3	1	2
<b>CO2</b>	1	3		3	2							1	2	2	2
<b>CO3</b>	1	1		2			1					3	3	1	
<b>CO4</b>	1	1		3	2		1					3	3	2	
<b>CO5</b>	1	2		2								2	3	2	

### Course Topics

#### UNIT I: COMPUTER INTEGRATED MANUFACTURING

Computer integrated manufacturing systems – structure and functional areas of CIM system - AD, CAPP, CAM, CAQC, ASRS and advantages of CIM Manufacturing communication systems – MAP/TOP OSI model, data redundancy, top-down and bottom-up approach, volume of

information. Intelligent manufacturing – system components, system architecture and data flow, system operation

## **UNIT II: ARTIFICIAL INTELLIGENCE**

Components of knowledge-based systems – basic components of knowledge-based systems, knowledge representation, comparison of knowledge representation schemes, inference engine, knowledge acquisition Machine learning – concept of artificial intelligence,

## **UNIT III: PROCESS PLANNING**

Automated process planning – variant approach, generative approach, expert systems for process planning, feature recognition, phases of process planning Knowledge Based System for Equipment Selection – Manufacturing system design, equipment selection problem, modelling the manufacturing equipment selection problem, problem solving approach in KBSES, structure of the KBSES

## **UNIT IV: GROUP TECHNOLOGY**

Group technology: models and algorithms – visual method, coding method, cluster analysis method, matrix formation – similarity coefficient method, sorting-based algorithms, bond energy algorithm, cost-based method, cluster identification method, extended ci method.

## **UNIT V: KNOWLEDGE BASE**

Knowledge based group technology - group technology in automated manufacturing system, structure of knowledge-based system for group technology – database, knowledge base, clustering algorithm

<b>CO1</b>															
<b>CO2</b>															
<b>CO3</b>															
<b>CO4</b>															
<b>CO5</b>															

**Course Topics**

**UNIT I: OVERVIEW OF ENGINEERING FRACTURE MECHANICS**

EFM Course Outline - Spectacular Failures – Lessons from Spectacular Failures- LEFM and EPFM Historical development- Fracture Mechanics is Holistic -Fatigue Crack Growth Model- Crack Growth and Fracture Mechanisms

**UNIT II: ENERGY RELEASE RATE**

Elastic Strain Energy - Fracture Strength by Griffith - Energy Release Rate - Utility of Energy Release Rate - Pop-in Phenomenon

### **UNIT III: REVIEW OF THEORY OF ELASTICITY**

Displacement and Stress Formulations Simply connected and multiply connected domains, Displacement and stress formulations, Compatibility conditions, Plane stress and plane strain situations, Airy's stress function, Semi-inverse method, Forms of stress functions in Cartesian co-ordinates. Forms of Stress Functions Solution to the problem of a beam under uniformly distributed loading, Forms of stress function in polar co-ordinates, List of problems that could be solved, Illustration of principle of superposition, Analytic functions.

### **UNIT IV: CRACK-TIP STRESS AND DISPLACEMENT FIELD EQUATIONS**

Airy's Stress Function for Mode-I -Cauchy-Riemann conditions-Westergaard Solution of Stress Mode-I -Displacement Field for Mode-I -Relation between KI and GI-Stress Field in Mode-II-Generalised Westergaard Approach -William's Eigen Function- Multi-parameter Stress Field Equations- Multi-parameter Stress Field Equations

### **UNIT V: SIF'S, MODELING OF PLASTIC ZONE, FRACTURE TOUGHNESS TESTING**

Evaluation of SIF for Various Geometries- SIF for Embedded Cracks - SIF for Surface Cracks - Modeling of Plastic Deformation Irwin's Model - Dugdale model- Fracture toughness test-Plane Strain Fracture Toughness Testing - Plane Stress Fracture Toughness Testing.

Prerequisite: Nil		Course Category: Honours Elective Course type: Theory				

### Course Objectives:

The aim of undergoing this course is to provide broad based understanding of the interdisciplinary subject 'tribology' and its technological significance

### Course Outcomes:

<b>CO1</b>	Explain the surface friction and types of wear at different conditions
<b>CO2</b>	Outline the theories of lubrication, lubrication regimes, theories of hydrodynamic, elasto hydrodynamic etc
<b>CO3</b>	Identify suitable wear testing equipment and standard procedure for different applications.
<b>CO4</b>	Apply suitable frictional components to reduce frictional wear.
<b>CO5</b>	Evaluate the various tribological instruments with international standards.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	2	2							1			2	1	
<b>CO2</b>	3	2	1	1						1			2	1	
<b>CO3</b>	3	3	2	2	2					1	1	1	2	1	
<b>CO4</b>	3	3	3	2	2					1	1	1	2	1	2
<b>CO5</b>	3	3	2	2	2					1	1	1	2	1	2

### Course Topics

#### UNIT I: SURFACE FRICTION AND WEAR

Topography of the surfaces - surface features - surface interaction - theory of friction - sliding and rolling friction, friction properties of metallic and non-metallic materials, friction in extreme conditions - wear- types of wear - mechanism of wear - wear resistance materials - surface treatment - surface modifications - surface coatings

## **UNIT II: LUBRICATION THEORY**

Lubricants-physical properties, lubricants standards, lubrication regimes - hydrodynamic lubrication - Reynolds equation - thermal, inertia and turbulent effects - elasto hydrodynamic, plasto hydrodynamic and magneto hydrodynamic lubrication - hydro static lubrication - gas lubrication

## **UNIT III: WEAR TESTING METHOD**

An abrasive wear tester-A rolling sliding wear tester- A pin-on-disc wear tester-Three body wear test.

## **UNIT IV: APPLICATION OF TRIBOLOGY**

Introduction-Rolling Contact Bearings- Gears- Journal Bearings – Off shore bearing, wind turbine sliding bearing

## **UNIT V: TRIBO MEASUREMENT IN INSTRUMENTATION**

Surface Topography measurements – Electron microscope and friction and wear measurements – Laser method – instrumentation - International standards – bearings performance measurements – bearing vibration measurement.

<b>MEC21XXX</b> <b>REFRIGERATION AND AIR CONDITIONING</b>		L	T	P	X	C
		3	1	0	0	4
Prerequisite: Nil		Course Category: Honours Elective Course type: Theory				

### Course Objectives:

Enable the students to understand the principles and concepts of refrigeration and air conditioning

### Course Outcomes:

<b>CO1</b>	Interpret the basic concepts of various refrigeration systems
<b>CO2</b>	Predict the types of refrigerants suitable for the applications considering the environmental issues
<b>CO3</b>	Employ the acquired knowledge to provide solutions for the psychrometric properties.
<b>CO4</b>	Identify the cooling load for a given space and suggest the cooling requirements
<b>CO5</b>	Impart knowledge about the air conditioning equipment and its usage

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	1		1								2	2	2	
<b>CO2</b>	3	1		1			1	3				2	2	1	
<b>CO3</b>	3	2										2	2		
<b>CO4</b>	3	2	2	1				1				2	2	1	
<b>CO5</b>	3											1	2		

### Course Topics

#### UNIT I: INTRODUCTION

Review of thermodynamic principles of refrigeration, concept of aircraft refrigeration system, Advanced vapour compression refrigeration cycle and system, use of P-H charts, multistage and multiple Evaporator systems, cascade system, COP comparison, Advanced vapour absorption

refrigeration system & components, ammonia water and lithium bromide water systems, steam jet refrigeration system

### **UNIT II: REFRIGERANTS AND APPLICATIONS**

Refrigerants - properties - selection of refrigerants, alternate refrigerants, refrigeration plant Controls testing and charging of refrigeration units- applications to refrigeration systems. Ozone depletion and global warming issues

### **UNIT III: PSYCHROMETRY AND COOLING LOAD CALCULATION**

Psychrometric processes-use of psychrometric charts, grand and room sensible heat factors, By pass factor, requirements of comfort air conditioning, comfort charts, factors governing optimum effective temperature, recommended design conditions and ventilation standards

### **UNIT IV: LOAD**

Types of load-design of space cooling load, heat transmission through building, solar radiation, Infiltration, internal heat sources (sensible and latent) ,outside air and fresh air load, estimation of total load-domestic, commercial and industrial systems-central air conditioning systems

### **UNIT V: AIR CONDITIONING EQUIPMENTS**

Air conditioning equipment – air cleaning and air filters, humidifiers ,dehumidifiers, air washers, Condenser, expansion devices, evaporator, cooling tower and spray ponds, elementary treatment of duct design, air distribution system-Thermal insulation of air conditioning systems– applications-car, industry, stores and public buildings.

<b>MEC21XXX</b> <b>MICROELECTROMECHANICAL SYSTEMS</b>	L	T	P	X	C
	3	1	0	0	4
Prerequisite: Nil	Course Category: Honours Elective Course type: Theory				

### Course Objectives:

The objective of this course is to make students to gain the knowledge in MEMS

### Course Outcomes:

<b>CO1</b>	Understand the basic concept of MEMS and their technology.
<b>CO2</b>	Understand (Illustrate) the material properties and identify the fabrication process.
<b>CO3</b>	Apply the knowledge to design the Micro and Nano devices for various applications
<b>CO4</b>	Apply the knowledge to design the components by analyzing various techniques.
<b>CO5</b>	Understand (Interpret) the concept of transducer design and their fabrication techniques

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2		3									1	2		
<b>CO2</b>	2	1						1					2	1	
<b>CO3</b>	2		2	1									2		
<b>CO4</b>	2		2	1									2		
<b>CO5</b>	2							1					2		

### Course Topics

#### UNIT I: FUNDAMENTALS OF MEMS

Introduction, history, development and need of micro-electro - mechanical systems, Components of MEMS- overview of MEMS technology

#### UNIT II: MATERIALS AND FABRICATION PROCESSES

Different electro-physical processes used for machining - dealing with MEMS materials - relevant non - conventional processes - IC fabrication processes used for MEMS - MEMS sensors and actuators.

### **UNIT III: NANO ELECTRO MECHANICAL SYSTEM**

Introduction to Design of NEMS biological and bio systems analogies - Devising and Synthesis of MEMS AND NEMS - MEMS Motion Micro devices Classifier – Synthesis Nano electromechanical Systems Modeling of Micro- and Nano-scale Electromechanical Systems – Devices, Structures and its Applications

### **UNIT IV: DESIGN CONSIDERATION**

Design consideration – process design-mechanical design –design of silicon die-design of micro fluidic network systems-capillary electrophoresis network system

### **UNIT V: MEMS AND NEMS**

Design and Fabrication Analysis of Translational Micro-transducers - Single-Phase Reluctance, Micro-motors -Modeling, Analysis, and Control - Three-Phase Synchronous Reluctance Micro-motors Micro-fabrication Magnetization, Dynamics of Thin Films Microstructures – Micro-transducers With Permanent Magnets.

<b>MEC21XXX</b> <b>ROBOT MECHANISM DESIGN</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Honours Elective Course type: Theory with practical				

### Course Objectives:

Emphasize on how to work with hardware and to be involved in controlling the robot using motors and controllers.

### Course Outcomes:

<b>CO1</b>	Introduce the concepts of Robot drive mechanism, Robot operating system (ROS) and Simulation.
<b>CO2</b>	Analyse the design and workings of ChefBot hardware and a selection of the interfacing of different actuators used in this robot with Tiva C Launchpad controller.
<b>CO3</b>	Evaluate the working of different sensors and its inertia measurements.
<b>CO4</b>	Interface the vision sensors with ROS and process the images that it senses using vision libraries such as OpenCV.
<b>CO5</b>	Design a GUI for a Robot using Python

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2		1		2					2			1		1
<b>CO2</b>	2				2					2			1		1
<b>CO3</b>	2	1			2					2					1
<b>CO4</b>	2	1			2					2			1		1
<b>CO5</b>	2		1		2					2			1		1

### Course Topics

#### UNIT I: BASICS OF ROBOTICS AND SIMULATION

History – Definition – Components – Building a robot – The Robot drive mechanism. Robot Simulation: Mathematical modelling of the robot - Robot kinematics – Concepts of ROS and Gazebo.

## **UNIT II: DESIGNING CHEFBOT HARDWARE**

Specifications - Block diagram - Working with Robotic Actuators and Wheel Encoders - Interfacing DC geared motor with Tiva C LaunchPad - Interfacing quadrature encoder with Tiva C Launchpad - Working with Dynamixel actuators.

## **UNIT III: WORKING WITH ROBOTIC SENSORS**

Working with ultrasonic distance sensors - Working with the IR proximity sensor - Working with Inertial Measurement.

## **UNIT IV: PYTHON AND ROS**

Introduction to OpenCV, OpenNI, and PCL - Programming Kinect with Python using ROS, OpenCV, and OpenNI - Working with Point Clouds using Kinect, ROS, OpenNI, and PCL.

## **UNIT V: INTERFACING IT INTO ROS, USING PYTHON**

Building ChefBot hardware - Writing a ROS Python driver for ChefBot - Understanding ChefBot ROS launch files - Working with ChefBot Python nodes and launch files - The Calibration and Testing of ChefBot - The Calibration of Xbox Kinect using ROS - Wheel odometry calibration - Testing of the robot using GUI.

### **Practical**

1. Computer program for analysis and synthesis of any mechanism and test it.
2. Determination of holding torque in epicyclic gear train.
3. Design of cams and followers
4. Experiment on Robot forward kinematic analysis
5. Experiment on Robot inverse kinematic analysis
6. Determination of mass moment of inertia and radius of gyration of robotic links.
7. Experiment on balancing of mass.

<b>MEC21XXX</b> <b>ROBOT COLLABORATIVE SYSTEM DESIGN</b>		L	T	P	X	C
		3	0	2	0	4
Prerequisite: Nil		Course Category: Honours Elective Course type: Theory with practical				

### Course Objectives:

To provide a brief introduction to robot cognition and collaborative system design.

### Course Outcomes:

<b>CO1</b>	Discuss about the basics of robot cognition and perception.
<b>CO2</b>	Illustrate the different methods of map building and the robot simulation and execution of a program.
<b>CO3</b>	Analyze the various path planning techniques by briefing about the robot's environment and explaining about the programs used .
<b>CO4</b>	Develop knowledge about simultaneous localization and mapping based techniques and paradigms.
<b>CO5</b>	Elaborate the various robot programming packages for display,tele-operation and other applications.

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	3	3		2	2								2	1	1
<b>CO2</b>	2		3	2						1			2		
<b>CO3</b>	3	2			1								1		
<b>CO4</b>	2		1	3										1	1
<b>CO5</b>	2	2	1	1			2			1			1		

### Course Topics

#### UNIT I: CYBERNETIC VIEW OF ROBOT COGNITION AND PERCEPTION

Introduction to the Model of Cognition, Visual Perception, Visual Recognition, Machine Learning, Soft Computing Tools and Robot Cognition.

## **UNIT II: MAP BUILDING**

Introduction, Constructing a 2D World Map, Data Structure for Map Building, Explanation of the Algorithm, An Illustration of Procedure Traverse Boundary, An Illustration of Procedure Map Building, Robot Simulation, Execution of the Map Building Program.

## **UNIT III: RANDOMIZED PATH PLANNING**

Introduction, Representation of the Robot's Environment, Review of configuration spaces, Visibility Graphs, Voronoi diagrams, Potential Fields and Cell Decomposition, Planning with moving obstacles, Probabilistic Roadmaps, Rapidly exploring random trees, Execution of the Quad tree-Based Path Planner Program.

## **UNIT IV: SIMULTANEOUS LOCALIZATION AND MAPPING (SLAM)**

Problem Definition, Mathematical Basis, Examples: SLAM in Landmark Worlds, Taxonomy of the SLAM Problem, Extended Kalman filter, Graph-Based Optimization Techniques, ParticleMethods Relation of Paradigms.

## **UNIT V: ROBOT PROGRAMMING PACKAGES**

Robot Parameter Display, Program for BotSpeak, Program for Sonar Reading Display, Program for Wandering Within the Workspace, Program for Tele-operation, A Complete Program for Autonomous Navigation.

<b>MEC21XXX</b> <b>ADVANCED FLUID DYNAMICS</b>		L	T	P	X	C
		3	1	0	0	4
Prerequisite: Nil		Course Category: Honours Elective Course type: Theory				

### Course Objectives:

### Course Outcomes:

<b>CO1</b>	Understand the basic concepts and properties related to fluid dynamics
<b>CO2</b>	Develop generalized forms of Bernoulli's equation for different models
<b>CO3</b>	Deduce methods for Reynold number approximation
<b>CO4</b>	Apply the theories of turbulence
<b>CO5</b>	Develop the governing equations for normal shocks

### Mapping of Course Outcomes:

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	2	2	2									2		
<b>CO2</b>	2	2	2	2									2		
<b>CO3</b>	2	2	2	2									2		
<b>CO4</b>	2	2	2	2									2		
<b>CO5</b>	2	2	2	2									2		

### Course Topics

#### UNIT I: REVIEW OF BASIC CONCEPTS AND FLUID PROPERTIES

Basic law of Fluid Motion, Internal stresses and external forces on fluid elements, Review of Concepts of Kinematics of fluid motion, vorticity, circulation, velocity potential and stream function, irrotational flow. Governing Equations of Fluid Flow in Differential Form: Navier –

Stokes Equation and exact solutions, Energy equation and solution of fluid flow with thermal effects

## **UNIT II: DYNAMICS OF IDEAL FLUID MOTION**

Applications, Integrations of Euler's Equation of Motion, Generalized form of Bernoulli Equation, Potential flows, Principle of Superposition. Low Reynolds number Approximation of Navier – Stokes Equation: Creeping flow over sphere, Stokes and Oseen approximation, Hydrodynamic Theory of Lubrication.

## **UNIT III: HIGH REYNOLDS NUMBER APPROXIMATION**

Prandtl's Boundary Layer Equations, Laminar Boundary Layer over a flat plate, Blasius solution, Falkner – Skan solution, Approximation method for solution of Boundary Layer Equation, Momentum Integral methods, Holstein and Bohlen method, Thermal Boundary Layer, Reynolds Analogy. Transition to Turbulence: Introduction to Theory of Hydrodynamic Stability, Orr-Sommerfeld equation, Results from transition studies, factor affecting transition and its control.

## **UNIT IV: FUNDAMENTAL OF TURBULENT FLOWS**

Reynolds stress tensor, Phenomenological theories of turbulence, Prandtl's Mixing Length and Eddy Viscosity concepts, Universal Velocity distribution, Laws of the Wall and the Wake. One Dimensional Isentropic Flow: General features, Working equations, Choking in Isentropic flow, Operation of nozzle, diffuser under varying pressure ratio, performance of real nozzles, applications of isentropic flow.

## **UNIT V: NORMAL SHOCKS**

Introductory remarks, Governing equations, Rankine Hugoniot, Prandtl and other relations, weak shocks, thickness of shocks, normal shocks in ducts, performance of convergent divergent nozzle with shocks, moving shock waves, shocks problems in one dimensional supersonic diffuser, supersonic pitot tube. Flow in constant area duct with friction: Governing equations, Working Formulas and tables, choking due to friction, Performance of long duct, Isothermal flow in long duct and flow in constant area duct with heating and cooling.

<b>MEC21XXX</b> <b>ANALYSIS OF BASIC MANUFACTURING PROCESS</b>	L	T	P	X	C
	3	1	0	0	4
Prerequisite: Nil	Course Category: Honours Elective Course type: Theory				

**Course Objectives:**

**Course Outcomes:**

<b>CO1</b>	Understand the working principle of advanced metal forming processes
<b>CO2</b>	Understand the methodology for development of powder metallurgy product
<b>CO3</b>	Understand the principles of welding
<b>CO4</b>	Understand the principles of casting
<b>CO5</b>	Understand the principles of extrusion

**Mapping of Course Outcomes:**

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	2	2	2									2	2	2
<b>CO2</b>	2	2	2	2									2	2	2
<b>CO3</b>	2	2	2	2									2	2	2
<b>CO4</b>	2	2	2	2									2	2	2
<b>CO5</b>	2	2	2	2									2	2	2

**Course Topics**

**UNIT I: ADVANCED METAL FORMING**

Drawing-Depp drawing, forging, bending, forming, cold processing and polymers, High energy rate forming, incremental forming

**UNIT II: POWDER METALLURGY**

Powder production, powder treatment, powder characterization, packing and flow characteristics of powders, density testing, porosity. High temperature computation, sintering, metallography of p/m parts, Metal injection molding, self-propagating high temperature synthesis.

### **UNIT III: WELDING**

Arc welding types, weldability and weldability testing, Residual stress and stress relief heat treatment.

### **UNIT IV: CASTING PROCESS**

Pattern making-machines and tools for (to refer John Campbell) pattern making - pattern allowances-gating design-riser design-metallurgical aspects of solidification-metal surfaces reaction-mold surface reaction-transformation zones.

### **UNIT V: ROLLING AND EXTRUSION PROCESS**

Rolling mills-Hot and cold rolling-forces and geometrical relationships on rolling-Deformation lubrication in extrusion-analysis of the extrusion process –extrusion of tubing.

<b>MEC21XXX</b> <b>MACHINE LEARNING ENGINEERING FOR PRODUCTION</b>		L	T	P	X	C
		3	1	0	0	4
Prerequisite: Nil		Course Category: Elective Course type: Theory				

**Course Objectives:**

**Course Outcomes:**

<b>CO1</b>	Identify the various components and design an ML production system end-to-end
<b>CO2</b>	Build data pipelines by gathering, cleaning, and validating datasets and assessing data quality
<b>CO3</b>	Build models for different serving environments
<b>CO4</b>	Use analytics tools and performance metrics to address model fairness
<b>CO5</b>	Deliver deployment pipelines by productionizing, scaling, and monitoring model serving that require different infrastructure

**Mapping of Course Outcomes:**

<b>PO</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>15</b>
<b>ASO</b>	<b>1</b>	<b>2</b>	<b>2</b>	<b>3</b>	<b>6</b>	<b>5</b>	<b>5</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>6</b>	<b>6</b>	<b>1,2</b>	<b>3,4,7</b>	<b>2,6</b>
<b>CO1</b>	2	2	2	2									2	2	2
<b>CO2</b>	2	2	2	2									2	2	2
<b>CO3</b>	2	2	2	2									2	2	2
<b>CO4</b>	2	2	2	2									2	2	2
<b>CO5</b>	2	2	2	2									2	2	2

**Course Topics**

**UNIT I: INTRODUCTION TO MACHINE LEARNING IN PRODUCTION**

Identify the key components of the ML lifecycle and pipeline and compare the ML modeling iterative cycle with the ML product deployment cycle. Identify the key challenges in model development and understand how performance on a small set of disproportionately important examples may be more crucial than performance on the majority of examples. Compare the various

types of problems to be solved for structured vs. unstructured data and big vs. small data and understand why label consistency is essential and how you can improve it

## **UNIT II: MACHINE LEARNING DATA LIFECYCLE IN PRODUCTION**

Identify responsible data collection for building a fair ML production system. Implement feature engineering, transformation, and selection with TensorFlow Extended by encoding structured and unstructured data types and addressing class imbalances. Understand the data journey over a production system's lifecycle and leverage ML metadata and enterprise schemas to address quickly evolving data. Combine labeled and unlabeled data to improve ML accuracy and augment data to diversify your training set.

## **UNIT III: MACHINE LEARNING MODELLING PIPELINES IN PRODUCTION**

Learn how to effectively search for the best model that will scale for various serving needs while constraining model complexity and hardware requirements. Learn how to optimize and manage the compute, storage, and I/O resources your model needs in production environments during its entire lifecycle. Implement distributed processing and parallelism techniques to make the most of your computational resources for training your models efficiently.

## **UNIT IV: MODEL ANALYSIS AND INTERPRETABILITY**

Use model performance analysis to debug and remediate your model and measure robustness, fairness, and stability. Learn about model interpretability – the key to explaining your model's inner workings to laypeople and expert audiences and how it promotes fairness and helps address regulatory and legal requirements for different use cases.

## **UNIT V: DEPLOYING MACHINE LEARNING MODELS IN PRODUCTION**

Deliver deployment pipelines by productionizing, scaling, and monitoring model serving that require different infrastructure. Establish procedures to mitigate model decay and performance drops. Establish best practices and apply progressive delivery techniques to maintain and monitor a continuously operating production system.

<b>CO1</b>	2	2	2	2									2	2	2
<b>CO2</b>	2	2	2	2									2	2	2
<b>CO3</b>	2	2	2	2									2	2	2
<b>CO4</b>	2	2	2	2									2	2	2
<b>CO5</b>	2	2	2	2									2	2	2

**Course topics**

**UNIT I: STATISTICS**

Important statistical concepts used in data science, Difference between population and sample  
Types of variables, Measures of central tendency, Measures of variability, Coefficient of variance

**UNIT II: INTERFERENTIAL STATISTICS**

Skewness and Kurtosis, Normal distribution, Test hypotheses, Central limit theorem, Confidence interval, T-test, Type I and II errors, Student's T distribution

**UNIT III: REGRESSION AND ANOVA, EXPLORATORY ANALYSIS**

Regression, ANOVA, R square, Correlation and causation, Data visualization, Missing value analysis, The correction matrix, Outlier detection analysis

**UNIT IV: SUPERVISED MACHINE LEARNING**

Python Scikit tool, Neural networks, Support vector machine, Logistic and linear regression  
Decision tree classifier

**UNIT V: TABLEAU**

Working with Tableau, Deep diving with data and connection, Creating charts, Mapping data in Tableau

**Text Book:**

1. Li Ping Chu, Data Science for Modern Manufacturing, 2016, O'Reilly Media, Inc.
